---

**Attention**

- This instruction manual is designed mainly for technicians, but it is advisable that also operators read the instructions with 🤖 mark to use the machine properly.
- The numbers in lower left corners of figures are figure numbers. We use them in texts as needed for your reference.

**Attention**

The description in this instruction manual is subject to change for improvements of the commodity without notice.
1. To ensure safe use
Always observe the following instructions to ensure the safe use of the industrial sewing machines and devices.

1-1 Application and purpose
The sewing machine is designed to improve productivity in the sewing industry and must not be used for other applications and purposes. Do not use this sewing machine until it can be confirmed that safety measures for the drive units have been taken.

1-2 Before use
Read all instruction manuals thoroughly before starting the use of this machine and follow them. Also, read the instruction manual for the installed drive unit.

1-3 Working environment
DO NOT WORK IN THE FOLLOWING ENVIRONMENTS:
- Place where atmosphere temperature and humidity give a bad influence the performance of sewing machines.
- Outdoors and place where the sewing machines are exposed to sunlight directly.
- Atmosphere containing dust, corrosive gases or flammable gases.
- Place where voltage fluctuation exceeds ±10% of the rated voltage.
- Place where power capacity necessary for the used motor specifications cannot be secured.
- Place where strong electric or magnetic fields are generated such as near large-output high frequency transmitters or high frequency welding machines.

1-4 Unpacking and transportation
(1) Unpack from the top.
(2) Never hold the parts near the needle or threading parts when removing the sewing machine head from the buffer of box.
(3) When carrying the sewing machine head, have an assistant.
(4) Pay attention not to get excessive impact or shock when moving the sewing machine head with a pushcart.

2. Installation and preparation
2-1 Instruction and training
Operators and workers, who supervise, repair or maintain the machine head and machine unit, are required to have the adequate knowledge and operation skills to do the job safely. In order to establish such necessary conditions, it needs for the employer to plan and enforce the safety education and training to those workers.

2-2 Sewing table and motor
(1) Prepare a machine table that has enough strength to withstand the weight of the sewing head and any reaction while operating.
(2) Maintain a comfortable working environment with considering the lighting and the arrangement of sewing machine so that the operators can work smoothly.
(3) When installing the control box and the related parts on the sewing machine, take care about the posture of the worker.
(4) Install the drive unit correctly according to the instruction manual.

2-3 Wiring
(1) Never connect the plug for power supply until assembly is finished.
(2) Fix the connectors securely to the sewing machine head, motor, and electric apparatus.
(3) Do not apply excessive force to the connection cords.
(4) Connect the cords away from the driving parts.
(5) Place the ground wire securely to the designated position on the machine head.

2-4 Before operation
(1) Take care not to attach lubricant, silicone oil, and grease on the eyes or skin.
Safety instructions

Keep them away from children.

(2) Be sure to fill or drop lubrication oil before operating the sewing machine.
Use the Yamato SF oil as specified.

(3) Never put your hand under the needle or near the moving parts of the machine when turning on power supply switch.

(4) When operating a new sewing machine, make sure the rotating direction of pulley agrees with the rotating-direction mark.

2-5 During operation

(1) Be sure to operate the sewing machine with the safeguards such as belt cover, finger guard, and eye guard.

(2) Never place the finger, hair or objects under the needle or close to the moving parts while operating the sewing machine.

(3) Be sure to turn off the power supply switch when threading or replacing the needles.

(4) Never place your hands close to the knives when operating the sewing machine with the trimming devices.

(5) Be sure to turn off the power supply switch when terminating the sewing work or leaving the sewing machine.

(6) If the sewing machine malfunctions, abnormal sound or smell something unusual while operating, be sure to turn off the power supply switch.

3. Maintenance, inspection, and repair

(1) Follow the instruction manuals for maintenance, inspector, and repair.

(2) Entrust the maintenance, inspection, and repair to specially trained personnel.

(3) Be sure to turn off the power supply switch and make sure the sewing machine and motor completely stop before the maintenance, inspection, and repair. (If using a clutch motor, take care that the motor keeps turning for a while even after turning off the power supply switch.)

(4) Do not modify the sewing machine by the customer's judgment.

(5) Be sure to use original replacement parts for repairs or maintenance.

4. Caution signs and alert pictorial markings

This instruction manual contains the following caution signs and alert pictorial markings to prevent you from injuring yourself or the sewing machine from being damaged.
Please follow the instructions.

4-1 Meanings of caution signs

WARNING indicates potentially hazardous situations which, if not heeded, could result in death or serious injury to you and others.

Caution indicates hazardous situations which, if not heeded, may result in minor or moderate injury to you and others, or may result in machine damage.

NOTE is used to emphasize essential information.
4-2 Alert pictorial markings

This mark indicates the warning which, if not heeded, could result in death or serious injury.

This mark indicates the caution for high temperature.

This mark indicates the warning which, if not heeded, could result in death or serious injury.

High-voltage applies in the control box. This label indicates that electric shock may be caused.

This label is affixed on the safeguards. Considering the operation, it is not affixed on the finger guard and eye guard. Be sure to operate with the finger guard and eye guard in position.

Stepping motor and solenoid may overheat if used continuously. To prevent a burn, take care not to touch.

If not connected earth line, static electricity may be generated and inflict injury on person. In addition, the malfunction of electric system may cause injury to person.

5. Warning labels on sewing machines

This label indicates that removal of the safeguards and works except for sewing performance while the power supply switch is on are prohibited. (For details, see the next page.)

Check the rotating direction of machine pulley agrees with 'ROTATING-DIRECTION SYMBOL'.
Safety instructions

Rotating direction symbol

CAUTION

Do not operate without eye guard and safety devices. Before threading, changing needle, cleaning etc. switch off main switch.
1. Name of each part

Fig. 1

- Top cover seal plug (for oiling)
- SP device

Fig. 2

Section X-X

Section Y-Y

Refer to the instruction of the motor for dimensions A, B, C, and D.

Table dimensions: 1200 × 596 × 50
2. Installation

2.1.2 Table top type (Type B)

Refer to the instruction of the motor for dimensions A, B, C, and D.

Fig. 3
2. Installation

2.1.3 Semi-submerged type

Fig. 4

Refer to the instruction of the motor for dimensions A, B, C, and D.

Table dimensions: 1200 x 540 x 40
2.1.4 Semi-submerged type with compact motor

Refer to the instruction of the motor for dimensions A, B, C, and D.

Section X-X

Fig. 5
2. Installation

2.2 Table top type

Install a machine correctly referring to Figs. 6 and 7.

Fig. 6

2.3 Semi-submerged type

Install a machine correctly referring to Figs. 8 and 9.

Fig. 8

Fig. 9
2.4 Motor pulley and belt

See the instruction manual for the motor used and install the motor properly.

Clutch motor:
To install a clutch motor, align the center of the machine pulley with that of the motor pulley when the motor pulley shifts to the left while toeing down the pedal.

Note: Table 1 shows the outside diameter of the motor pulley, rpm of the machine, and size of the belt when using the clutch motor of 3-phase, 2-pole, 550 W(3/4HP).
The outside diameter on the table shows the nearest size to the calculated values based on the commercial available pulleys at intervals of 5 mm.

⚠️ CAUTION ⚠️
Use only those motor pulleys applicable to the machine. If not, the sewing speed will be over maximum and it can cause the damage to the machine.

Servomotor:
Calculate the outside diameter of a motor pulley from the formula as below.
Or see Table 2 to select a proper motor pulley.

Outside diameter of motor pulley = \text{Usual sewing speed} \times 64.5 + 5 \text{ mm}

Table 2
2.5 Hanging belt

**WARNING**
Before hanging belt, ALWAYS turn the power switch OFF and check that the machine has already stopped.

Use the M-type of V-belt.

1. Hang the belt (1) on the machine pulley (2), and then on the motor pulley (3) while rotating the machine pulley.
2. Adjust the belt tension so that the belt has 10 - 20 mm slack when its center is pushed with 10N (1.02kgf).
3. Lock the motor with the adjusting bar (4).

2.6 Belt cover

**WARNING**
Be sure to install belt cover to prevent you from injuring and a material from being caught by the belt.

1. Install the belt cover (5). (Fig. 12)
2. Push the belt cover support (6) to the belt cover (5) to install it.
3. Fix the belt cover (lower) (7) on the machine table only for table top type. (Fig. 14)
2.7 Eye guard and finger guard

To ensure safe use, always install the eye guard\textsuperscript{1} and the finger guard\textsuperscript{2} on the prescribed position when operating.

Fig. 15
3. Sewing speed and rotating direction of pulley

The maximum sewing speed is 6500 rpm (during intermittent operation).
Run a new machine at 5500 rpm during the first 200 hours (for about one month) so that the machine can offer a long service life in good condition.

The rotating directions of the machine pulley① and the handwheel② are clockwise as shown in the figure.

⚠️ CAUTION ⚠️
If rotating in reverse direction, oil cannot be supplied properly. It can cause the damage to the machine.

Fig. 16
4. Lubrication

**WARNING**

Before lubricating, ALWAYS turn the power switch OFF and check that the machine has already stopped.

4.1 Lubricating oil

Use YAMATO SF OIL No. 28.

**CAUTION**

Never add additives to the oil.
If added, it can cause the deterioration of the oil and the damage to the machine.

4.2 Lubricating

When using a new machine, or a machine which has not been run for a while, supply a few drops of oil to the needle bar ① and the looper bar ②.

Remove the seal plug③ indicated “OIL” and supply oil to the upper line of the oil sight gauge④.

Check that oil splashes from the nozzle inside the oil sight window⑤ with running the machine.
If oil does not splash from the nozzle, see “4.4 Checking and replacing oil filter” on page 12.

**CAUTION**

Too much or insufficient oil can cause oil leakage and machine trouble. Be sure to keep the oil level between the lines. Also too much lubrication can cause oil scatter and material stain.
4. Lubrication

WARNING

Before lubricating, ALWAYS turn the power switch OFF and check that the machine has already stopped.

4.3 Changing oil

Period of changing:
When using a new machine, change the lubricating oil after running a machine for 200 hours (for about one month). After that, change the oil once or twice a year.

Procedure for changing:
(1) Remove the belt cover. (See page 8)
(2) Remove V-belt from the motor pulley. (See page 8)
(3) Remove the machine from the machine table.
(4) Set a container received the oil under the screw ①.
(5) After removing screw ①, the oil is drained.

NOTE
Be careful not to soil the V-belt and the machine pulley with the oil.

(6) Reset the screw ①.
(7) Change the oil. (See "4.2 lubricating" on page 11)
(8) Reset the machine on the machine table.
(9) Hang V-belt on the motor pulley and reset the belt cover. (See page 8)

4.4 Checking and replacing oil filter

◆ If the oil filter ② is clogged with dust, lubrication cannot be done properly.
◆ Remove the oil filter cap ③ and the oil filter ② to check them every six months. If clogged or cracked, clean or replace the oil filter.
◆ If oil is splashed from the nozzle insufficiently or includes many bubbles though the oil is sufficiently kept, check or replace the oil filter.

NOTE
Carefully check and replace them without spilling oil stagnant in the oil filter ② when loosening screw ④.
5. Proper operation

5.1 Needle system

Use UY × 128GAS (UY128GAS).
Select a proper needle in size depending on the thickness and type of fabric.

Table 3

5.2 Installing needles

⚠️ WARNING ⚠️
Before installing, ALWAYS turn the power switch OFF and check that the machine has already stopped.

1. Loosen the screws① with a screwdriver. (Fig. 23)
2. Remove an old needle with a pair of tweezers.
3. Insert a new needle into the needle clamp② as far as it will go with facing its scarf to the right back. (Figs. 24 and 25)
4. Tighten the screws① with a screwdriver

**NOTE**
Tighten the screws① with a tightening torque of 0.6N·m (6kgf·cm).

---

Fig. 23

Fig. 24

Fig. 25
5. Proper operation

5.3 Threading

When not threaded, thread correctly as shown in Fig. 26.
When threaded, rethread after knotting preset threads.

☆ Needle thread
Pull out the thread until it is in front of the needle. Then, cut off the knot before needle eye to rethread.

Thread correctly for the left needle in the inmost position as shown in the figure.

☆ Top cover thread
Pull the thread until the knot is out.

Fig. 26

☆ Looper thread
Pull the thread until the knot is out.
Then, cut off the knot.

Note: Threading for sewing with "UT" or "UT-A" device
* For standard type of thread, thread through the looper thread eyelet (left) ④ via the looper thread release ③. (Thread A)
* For cotton thread or polyester thread, thread directly through the looper ⑤ via the looper thread release ③. (Thread B)

Note: For easy threading, pull the lever ② of the thread take-up eyelet holder ①.
After threading, push the lever ② to reset the thread take-up eyelet holder ① to the original position.
5.4 Adjusting thread tension

Adjust the thread tension with the thread tension spring caps ① depending on fabric type, thread type, seam width, stitch length, and other sewing conditions.

- To tighten the thread tension, turn the caps clockwise.
- To loosen the thread tension, turn the caps counterclockwise.

5.5 Pressure of presser foot

Loosen the lock nut ② and turn the presser spring regulator ③ to adjust the pressure.

- To increase the pressure, turn it clockwise.
- To decrease the pressure, turn it counterclockwise.

Keep the pressure to a minimum for stable sewing performance.

Supplement

With walking presser foot, do not adjust the pressure with the presser spring regulator ③. See “5.11 Pressure of walking presser foot”.

5.6 Adjusting position of presser foot

⚠️ WARNING

Before adjusting, ALWAYS turn the power switch OFF and check that the machine has already stopped.

Adjust left-and-right position of the needle holes of the presser foot.
Loosen the screw ④. Move the front of the presser foot right or left so that the needle drops in the center of the needle drop.
Then, tighten the screw ④ securely.
5. Proper operation

![WARNING]

Before operating, ALWAYS turn the power switch OFF and check that the machine has already stopped.

5.7 Adjusting movement of differential feed dog

The differential ratio has been set from 1:0.9 to 1:1.4 at shipment.
When aligned the differential feed lever(right)① with the line② of the differential feed graduations, the movement of the differential feed dog is the same as that of the main feed dog (differential ratio 1:1), resulting in uniform sewing.

1) Loosen the lock nut③.
2) Turn the adjusting screw④ to adjust the movement of the differential feed dog.
   ● To increase the movement for gathering, turn it clockwise.
   ● To decrease the movement for stretching, turn it counterclockwise.

3) Tighten the lock nut③ securely.

---

![Fig. 30]

---

![Fig. 31]
5.8 Adjusting stitch length

Stitch length is adjustable from 1.4 to 3.6 mm. Table 4 shows the number of stitches per inch (25.4 mm) and 30 mm converted to the stitch length.

The main feed lever stopper(5) has been adjusted so as to stop at maximum 3.6 mm with the screw(6) at shipment.

Adjusting procedure:

1. Loosen the lock nut(1).
2. Align the end of the main feed lever(4) with the required position on the main feed graduations(3). Turn the main feed bar adjusting screw(2) to adjust it.

- To make the stitch length smaller, turn it clockwise.
- To make the stitch length larger, turn it counterclockwise.

<table>
<thead>
<tr>
<th>Stitch length (mm)</th>

</tr>
</tbody>
</table>

Table 4

Fig. 32

Fig. 33
5. Proper operation

**WARNING**
Before operating, ALWAYS turn the power switch OFF and check that the machine has already stopped.

### 5.9 Raising upper feed roller (with puller mechanism)

Move the upper feed roller lifting lever ② up or down to raise the upper feed roller① when pulling out a fabric due to fabric jam. Raising the upper feed roller lifting lever② keeps raising the upper feed roller①.

![Fig. 34](image)

### 5.10 Pressure of upper feed roller (with puller mechanism)

Adjust the pressure of the upper feed roller as low as possible to feed a fabric while putting between the upper and lower feed rollers. Turn the adjusting screw③ to adjust it.

- To increase the pressure, turn it clockwise.
- To decrease the pressure, turn it counterclockwise.

![Fig. 35](image)
5.11 Pressure of walking presser foot

The walking presser foot can effect on prevention of ply shift between upper and lower fabrics for hemming operation, also can feed fabrics smoothly even if running at high speed of 5500 rpm or over.

Loosen the screw① and turn the nut② to adjust the pressure.

- To increase the pressure, turn it clockwise.
- To decrease the pressure, turn it counterclockwise.

After adjusting, turn the screw① clockwise and tighten the nut② securely.

Supplement

1. Increase the pressure if fed a lower fabric too much and decrease the pressure if fed a upper fabric too much.
2. Too high pressure of the walking presser foot③ reduces ply shift prevention.

5.12 Position of folder (Extra)

(1) Loosen the screws④ of the folder.
(2) Align the folders(right)⑤ and (left)⑥ with the fabric end depending on hem width.
(3) Tighten the screws④ securely.

* Use the folder chip⑦ for light weight fabric. Fix it with the screw⑧.
5. Proper operation

⚠️ WARNING ⚠️

Before operating, ALWAYS turn the power switch OFF and check that the machine has already stopped.

5.13 SP device and HR device

Use SP device (needle thread oiling) equipped as standard to prevent thread breakage and skip stitch when running a machine at high speed or using synthetic thread and/or synthetic fabric. Also use HR device (needle point cooling) as an extra.

Use dimethyl silicon oil.

Open the lid① of SP container and the lid② of HR container to check the oil level.

⚠️ CAUTION ⚠️

1. When not using SP device and HR device, remove the felt③. If not removed, it may occur irregular condition during sewing.
2. If silicone oil is stuck to the parts other than SP and HR devices, it can cause the machine trouble. Be sure to wipe it away.

5.14 Cleaning the machine

Clean waste thread and dust inside the machine at the end of work a day.

Remove the seal plug④ at the back of the machine and clean the grooves in the stitch plate, feed dog area, and oil filter screen area once a week.

**NOTE**

If the oil filter screen is clogged with dust, oil in the cylinder does not return to the oil reservoir. It can cause oil leakage.

![Fig. 38](image38)

![Fig. 39](image39)

![Fig. 40](image40)
6. Adjustments

WARNING
Before adjusting, ALWAYS turn the power switch OFF and check that the machine has already stopped.

6.1 Needle thread tension

Needle thread eyelet:
As standard, align the center of the screw with the line of the needle thread eyelet bracket④ as below.

Right needle thread eyelet①: top line
Middle needle thread eyelet②: middle line
Left needle thread eyelet③: bottom line

- To loosen the needle thread tension, lower the needle thread eyelet.
- To tighten the needle thread tension, raise the needle thread eyelet.

Needle thread guide:
Make the distance between the center of the eye in the needle thread take-up⑥ and the top of the needle thread guide⑤ to 2.0 mm when the needle thread take-up⑥ is at the lowest point as standard.
Loosen the screw⑦ to adjust it.

- To make the needle thread loop larger or when using stretchable thread, raise the needle thread guide⑤.
- To make the loop smaller, lower the needle thread guide⑤.
6. Adjustments

6.2 Top cover thread tension

Align the center of the slot of the top cover thread eyelet(upper)① with the center of the screw ② as standard.
Loosen the screws② and ③ to adjust it.

- To increase the feeding amount, raise the top cover thread eyelet(upper)①.
- To decrease the feeding amount, lower the top cover thread eyelet(upper)①.

NOTE
When using stretchable thread like woolly, adjust the top cover thread eyelet(upper)① higher than standard.

6.3 Looper thread tension

Align the eyes of the thread take-up eyelets(left)⑤ and (right)⑥ with the lines④ on the thread take-up eyelet holder as standard.
Loosen the screws of both thread take-up eyelets to adjust them.

- To tighten the looper thread tension, raise both eyelets.
- To loosen the looper thread tension, lower both eyelets.

NOTE
When using stretchable thread, move the thread take-up eyelets⑤ and ⑥ at the lowest points. Do not thread through the top cover tension disc⑦.
6.4 Needle and spreader

6.4.1 Spreader

(1) Loosen the screws ③ and ④ of the spreader holder. (Fig. 47)
(2) Make the clearance between the left needle and the hook② of the spreader① to 0.5 - 0.8 mm. (Fig. 45)
(3) Make the clearance between the center of the left needle and the hook② to 4.5 - 5.5 mm when the spreader① is at the extreme left. Then tighten the screw④ securely. (Figs. 45 and 47)
(4) Make the height from the top of the stitch plate to the bottom of the spreader① to 8.5 - 9.5 mm. Then tighten the screw③ securely. (Figs. 46 and 47)

NOTE
Adjust the height of the spreader so that the top cover thread passes behind the right needle and be caught by the left needle within adjustable range based on the needle distance.
6. Adjustments

6.4.2 Top cover thread guide

(1) Loosen the screws ② of the top cover thread guide①. (Fig. 48)
(2) Make the clearance between the top of the spreader③ and the bottom of the top cover thread guide① to 0.5 mm. (Fig. 48)
(3) Set the hook④ in the center of the slot of the top cover thread guide① when the spreader③ is at the extreme right. Then, tighten the screws ② securely. (Figs. 48 and 49)

6.4.3 Top cover thread eyelet

(1) Loosen the screw⑥ of the top cover thread eyelet⑤. (Fig.49)
(2) Make the clearance between the top of the top cover thread guide① and the top cover thread eyelet⑤ to 1.0 mm when the needle bar is at the lowest point. (Fig. 48)
(3) Set the eye of the top cover thread eyelet⑤ along the extending line from the slot of the top cover thread guide①. (Fig. 49)
(4) Tighten the screw⑥ securely. (Fig. 49)
6.5 Distance between needle and looper

The distance between the looper tip and the center of the right needle depends on the needle distance when the needles are at the lowest points and the looper① is at the extreme right.

See Table 5 and loosen the screw② of the looper holder to adjust the distance.

**NOTE**

The distance between the center of the needle bar and the looper① tip is 6.0 mm even if the needle distance changes.

</tbody>
</table>

Table 5

The timing gauge (No. 95220) makes it possible to adjust the distance easily.
A timing gauge is an extra part. Place an order with our agents or directly with us, if needed.

6.6 Using timing gauge

A timing gauge has the marks (A, B, C, D, E) for each needle distance.

Move the looper at the extreme right. Keep fitting the right needle into the groove "凸" corresponding needle distance, and fit the looper tip to the gauge.
Then, tighten the screw② securely.
6.7 Height of needle

1. Install the needle to the left hole in the needle clamp.
2. Check the looper is inserted into the looper holder fully.
3. Turn the handwheel until the looper tip meets the center of the left needle.
4. Loosen the screw ① of the needle bar bracket and move the needle bar up or down. Adjust the looper tip to pass 0.8 - 1.3 mm above the top of the needle eye.
5. Tighten the screw ① securely. Check that the needle drops in the center of the needle hole of the stitch plate.

6.8 Front-and-rear position of needle and looper

1. Turn the handwheel until the looper tip ④ meets the center of the left needle ⑤.
2. Loosen the screw ③ and move the looper holder back or forth. Make the clearance between the back of the left needle ⑤ and the looper tip to 0.2 - 0.3 mm. Then, tighten the screw ③ securely.

**NOTE**

When tightening the screw ③, front-and-rear position of the looper may be shifted. Recheck the position after tightening it.
6.9 Needle and needle guard (rear)

1. Turn the handwheel clockwise to lower the needles at the lowest points.
2. Loosen the screw ①.
3. Align the line ③ on the needle guard (rear) ② with the centers of the needle eyes.
4. Tighten the screw ① securely.
5. Turn the handwheel until the looper tip meets the center of the right needle.
6. Loosen the screws ① and ④, and move the needle guard (rear) ② back or forth. Make the clearance between the right needle and the looper tip to 0 - 0.05 mm.
7. Check the clearance between the left needle and the needle guard (rear) is 0 - 0.05 mm with keeping (6).
8. Tighten the screws ① and ④ securely.

Fig. 57

Fig. 58

Fig. 59
6. Adjustments

6.10 Needle and needle guard (front)

(1) Turn the handwheel clockwise until the looper tip meets the center of the left needle.
(2) Loosen the screw①. Adjust the height from the needle tip to the angular part of the needle guard(front)② to 1.5 - 2.0 mm.
(3) Tighten the screw① securely.
(4) Loosen the screws① and ③. Adjust the clearance between the needle guard(front)② and the left, or right needle to 0 - 0.3 mm respectively.
(5) Tighten the screws① and ③ securely.

Fig. 60

1.5 - 2.0 mm

Fig. 61

Fig. 62

0 - 0.3 mm

6.11 Height of feed dog

Adjust the height from the top of the stitch plate to the tops of the differential feed dog④ and the main feed dog⑤ to 1.0 - 1.2 mm when the feed dogs are at the highest points as standard. Also they are parallel to the top of the stitch plate. Loosen the screws⑥ and ⑦ to adjust them.
6. Adjustments

⚠️ WARNING
Before operating, ALWAYS turn the power switch OFF and check that the machine has already stopped.

6.12 Changing range of differential ratio

6.12.1 Differential ratio 1:1.4 - 1:1.8

(1) Adjust the stitch length to 2.5 mm or less.
(2) Loosen the screw of the differential feed lever stopper① and set the stopper① to the top.
(3) Loosen the lock nut② and turn the adjusting screw③ clockwise to raise the differential feed lever(right)④.
(4) Tighten the lock nut② securely.

NOTE
Maximum stitch length of the main feed dog is 25 mm in a differential ratio of 1:1.8.

Fig. 64

Fig. 65
6. Adjustments

**WARNING**

Before operating, ALWAYS turn the power switch OFF and check that the machine has already stopped.

6.12.2 Differential ratio 1:0.6 - 1:1.1

1. Remove the side cover (three pcs. of screws).
2. Remove the screw ③ of the differential feed bar connection ②.
3. Fix the differential feed bar connection ② in the hole ④ with the screw ③.

Fig. 66

Fig. 67

Fig. 68
6.13 Presser foot lift

The presser foot lift for the needle distance 5.6 mm is as follows:
- with spreader: 6.0 mm
- without spreader: 7.0 mm

(1) Loosen the lock nut ①.
(2) Lower the lifter lever ② to make the clearance between the top of the stitch plate and the bottom of the presser foot to 6.0 mm (7.0 mm).
(3) Adjust the screw ③ to touch the lifter lever ② when the presser foot is raised by 6.0 mm (7.0 mm).
(4) Tighten the lock nut ① securely.
(5) Loosen the screws ⑤ of the collar ④.
(6) Make the clearance between the presser bar bushing ⑥ and the collar ④ to 0.2 mm when the presser foot is raised by 6.0 mm (7.0 mm).
(7) Tighten the screws ⑤ securely.
6. Adjustments

6.14 Feeding amount of puller (with puller mechanism)

(1) Remove the top cover seal plug①.
(2) Rotate the handwheel until the screw② of the upper feed roller regulator comes right above.
   Loosen the screw② with a hexagon socket screwdriver.
(3) Rotate the handwheel until the adjusting screw③ comes right above. (Fig. 72)
(4) Turn the adjusting screw③ to adjust the feeding amount.
   • To decrease the amount, turn it clockwise.
   • To increase the amount, turn it counterclockwise.
(5) Tighten the screw② with a tightening torque of 2.5 N·m securely.

To make fine adjustment, loosen the nut⑤ of the upper feed roller lever rod⑥ for the upper feed roller lever④. And move the screw⑥ up or down to adjust it.

• To decrease the amount, move it up.
• To increase the amount, move it down.

6.15 Pressure of clutch tension spring (with puller mechanism)

(1) Loosen two screws⑧ to tighten the collar⑦ slightly.
(2) Turn the adjusting screw⑨ to adjust the pressure of the clutch tension spring⑩.
   • To increase the pressure, turn it clockwise.
   • To decrease the pressure, turn it counterclockwise.
   Keep the pressure as to turn the spring⑩ manually.
(3) Tighten two screws⑧ securely.
6.16 Pressure of walking presser foot

Correct balance between the presser bar spring (1) and the walking presser foot spring (2) is required to operate the walking presser foot properly.

(1) Make the height of the walking presser foot spring (2) to 20 mm. See “5.11 Pressure of walking presser foot”.
(2) Remove the head cover.
(3) Loosen the adjusting screw (5) to set the presser bar connecting bracket (3) 2.7 mm below the top of the presser bar (4).
(4) Tighten the screw (7) of the presser bar stopper (6) in the center of the slot slightly.
(5) Make the height from the top of the arm to the top of the presser spring regulator (3) to 11 mm. (Standard presser spring regulator (3) # 77270: 33 mm)
(6) Check the bottom of the presser foot touches the stitch plate closely when the feed dog lowers under the stitch plate.
   If not closely, readjust (3) - (5).
(7) Rotate the handwheel clockwise to raise the needle at the highest point. Place two fabrics to be sewn under the presser foot.
(8) Lower the needle tip in the front of the fabric.
   Loosen the screw (7) to adjust the height of the presser bar stopper (6) so that the center of the needle is aligned with that of the line “a”.
(9) Check only bottom (10) of the presser foot synchronized with the feed dog up and down.
   If not synchronized or whole presser foot moves, readjust it.
(10) Raise the needle at the highest point. Set the bottom of the presser foot to move about 1 mm backward to align the front “b” of the line “a” with the center of the needle, when raising the presser foot.
   Turn the adjusting screw (9) to adjust it.
   - To move forward, turn it clockwise.
   - To move backward, turn it counterclockwise.

Reference: Make the distance from the bottom of the washer (11) to the hinge pin (12) to 9.7 mm as standard.
