### New Tatter-a-fact® Episode!

Episode #41: Our 2023 New Years Resolutions! + Our 2022 Resolution Recap

On the last episode of Tatter-a-fact® 2022 and season 2, I'm joined by the Girlz Ink Girlz to talk all about our goals. Michon, Amy and I discuss the goals we met in 2022 and the ones we're carrying into 2023. We didn't meet all of our goals but they did help keep us on track for what we want to achieve next year! What's your number one goal to make happen for 2023? 🤔

These are topics we talk about:

[Michon Martinez aka msemeraldink Talks About Her 2022 Achievements and the Goals She Met](#)

[Amy Owens aka amyvegasink Talks About Her 2022 Achievements and the Goals She Met](#)

[Teryn Darling Talks About Her 2022 Achievements and the Goals She Met](#)

### Are You Shaking Properly?

Shake shake shake...shake shake shake...shake your bottle...shake your bottle!

If you are not shaking your pigments for at least 30 seconds then some of the actual pigment color could be left on the bottom, which means your pigment is not full strength!

You don't want to do your procedures with pigment that's mostly sterile water, glycerin and alcohol filling...no way! We want to do our procedures with the power and yumminess of the pigment thoroughly mixed.

Make sure you remove the pigment's cap, and with either a gloved finger or a tissue, place your finger on the tip and begin to shake. Shake for at least 30 seconds to ensure the pigment is mixed.

You always want to remove the pigment's cap so you're not wasting pigment and creating a mess out of your bottle!

Stay Safe and Happy Tattooing!

### Can You Get Pixels with Iron Oxide Pigments?

Pixels. You know, those beautiful dots that create an almost dusted topical makeup effect. Can you create them with iron oxide pigments?

Over the past few months I've heard too many people claim that you can't achieve pixels when you use an iron oxide pigment. This just isn't true! You can achieve a beautiful healed pixelated brow with both carbon based and iron oxide pigments.

The pixels aren't created because of the kind of pigment you use. Pixels are made when a few things are combined: proper...
