## MAELSTROM MMU-X3

### OPERATOR'S MANUAL

## Model

### MAELSTROM MMU-X3

POWER One RCR26650 battery

OUTPUT Maximum: 1600 lumens  
Low: 200 lumens

RUNTIME Maximum: 2.5 hours  
Low: 11 hours

## Operation

The Maelstrom MMU-X3 features a simple, two-mode interface that takes only a few seconds to master. To start, please make sure the MMU-X3 battery is inserted with the positive side (+) toward the head. Then, tighten the tailcap fully down and the MMU-X3 will turn on. Loosen the tailcap a half-turn, and the MMU-X3 will turn off.

The MMU-X3 tailcap has a pressure-style switch. When the tailcap is loosened a half-turn, simply press the button on the back to activate the light. The switching mechanism is momentary, which means when you stop pressing on the button, the MMU-X3 will turn off. To 'lock' the MMU-X3 on, simply tighten the tailcap fully down again.

To switch between the high and low output modes, turn the MMU-X3 off, and then turn it on again within 1 second. Any time the MMU-X3 is turned on within 1 second of being turned off, it will automatically switch to the next mode. However, if you leave the MMU-X3 off for 2 seconds or longer, it will "memorize" the last mode used. See the examples below:

Example 1:

ON (High mode) --- OFF (1 Second) --- ON (Low mode)

Example 2:

ON (High mode) --- OFF (2 Seconds) --- ON (High mode)
