

Smart Life Alexa Installation Guide

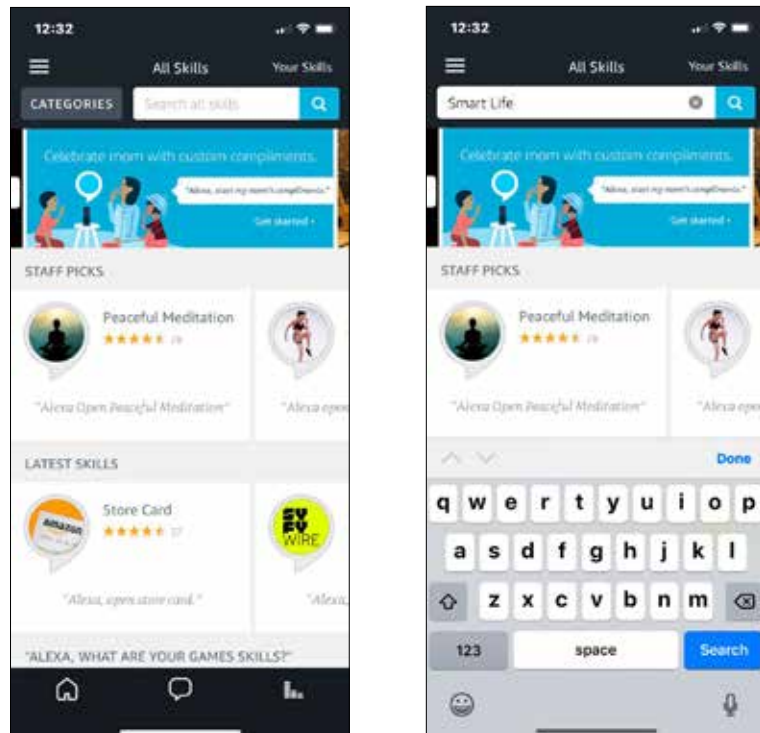

- 1 | Download or open the Alexa app.
- 2 | Create an account or sign in with your existing Amazon account.

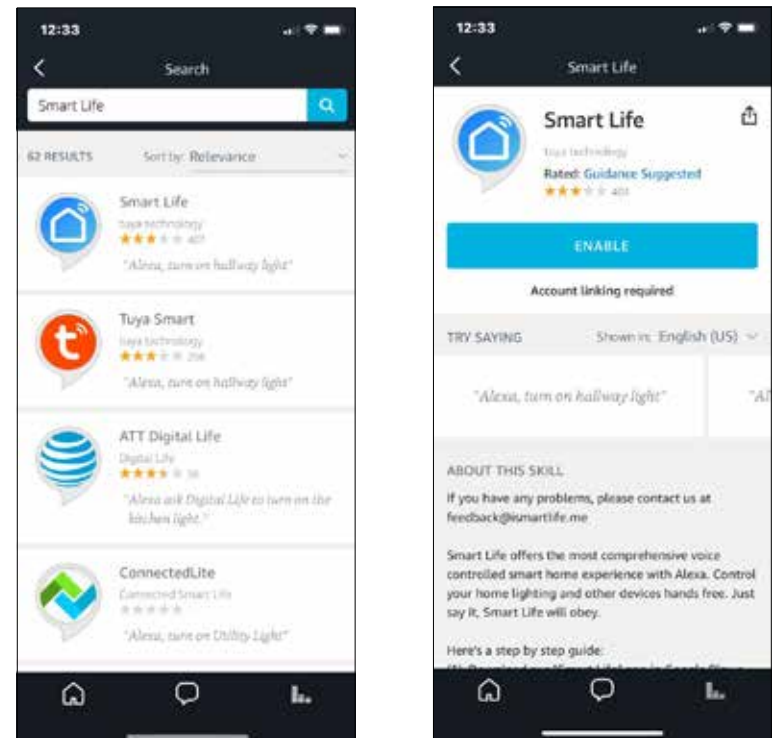

- 3 | Once on the Alexa app home screen, select the  MENU icon and then select **Skills**.

4 | Type “Smart Life” into the Search Box.

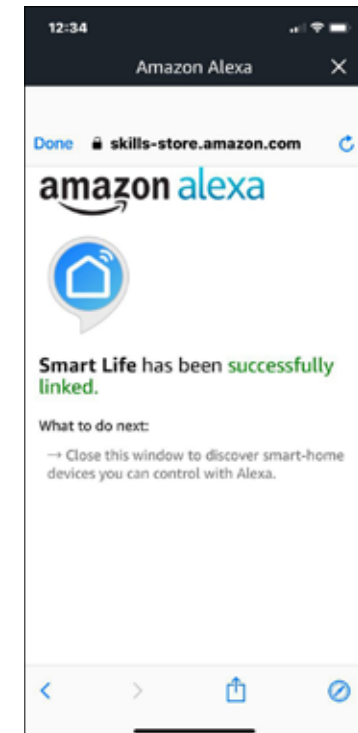

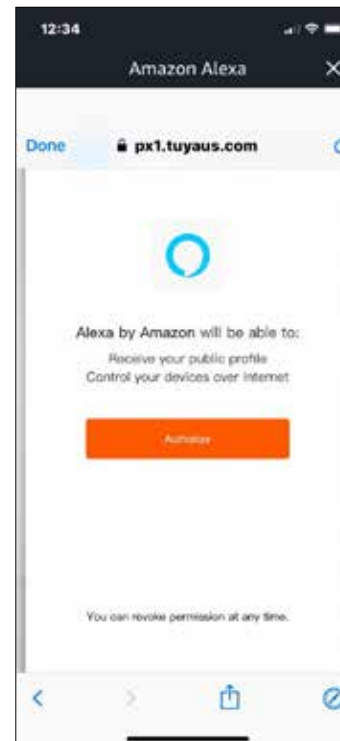

5 | Select “Smart Life” then select **ENABLE**.

6 | Enter your Smart Life credentials.

7 | Select **Authorize** to give your Alexa app permission to connect with Smart Life.

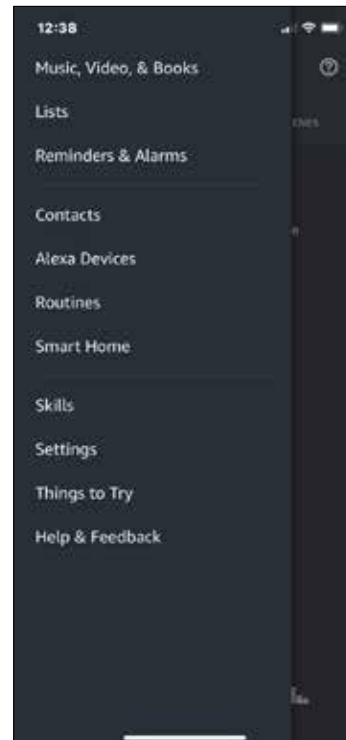

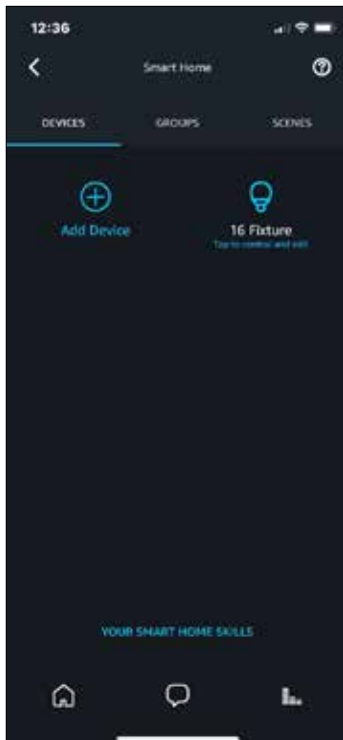

- 8 Select **DISCOVER DEVICES**. Once selected, your Alexa app will automatically sync all the devices that were set up in Smart Life with your Alexa App.

- 9 After the Alexa App syncs your devices, the app will take you to the Smart Life control center.

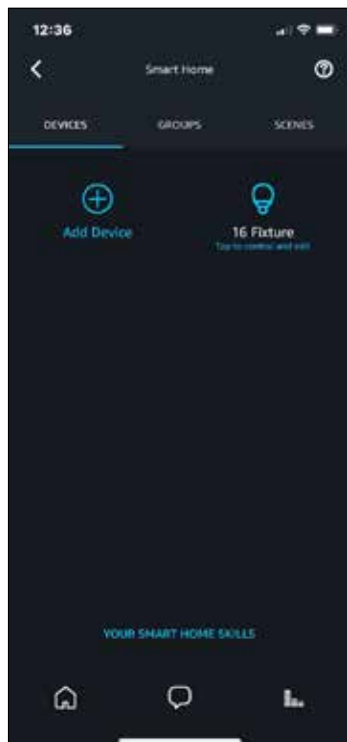

- 10 | You can navigate back to this section by selecting the  MENU icon and then selecting **Smart Home**.

- 11 | After selecting **Smart Home** it will bring you back to your control center that allows you to control all of your connected lighting.

- 12 You are able to view and select all of your Smart lights in the **DEVICES** tab. For example “16 Fixture.” This will bring you to an individual menu that allows you to change the color and brightness of your lighting device depending on the type of light.

colors for RGBW devices

colors for RGBW devices

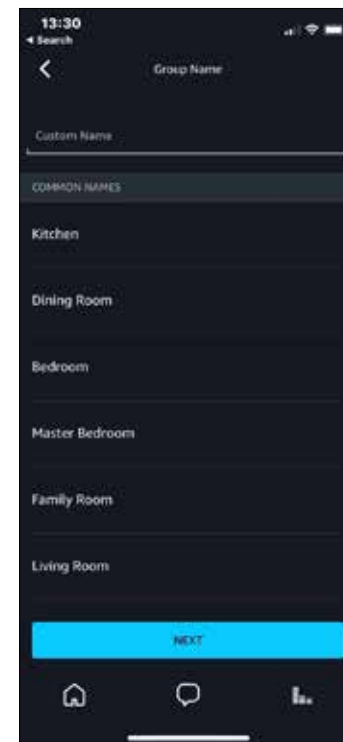

- 13 | If you would like to group multiple lights together, navigate to the **GROUPS** tab near the top of the screen. Select **Add Group**.

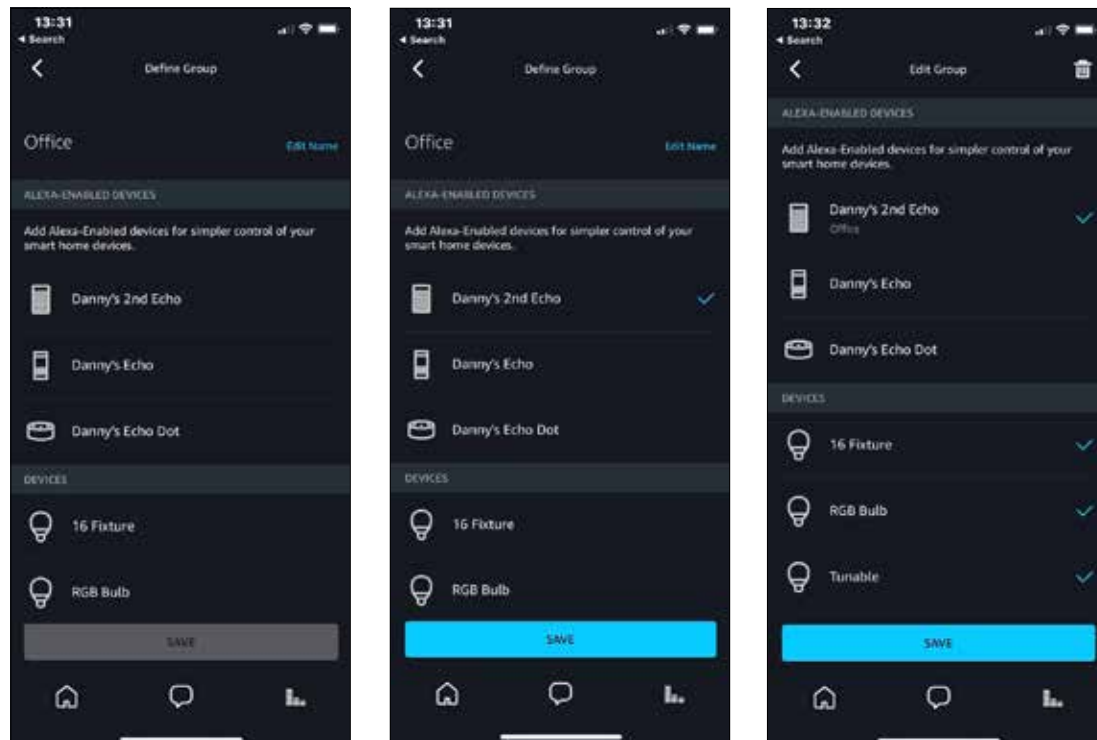

- 14 | Select **Smart Home Group**.

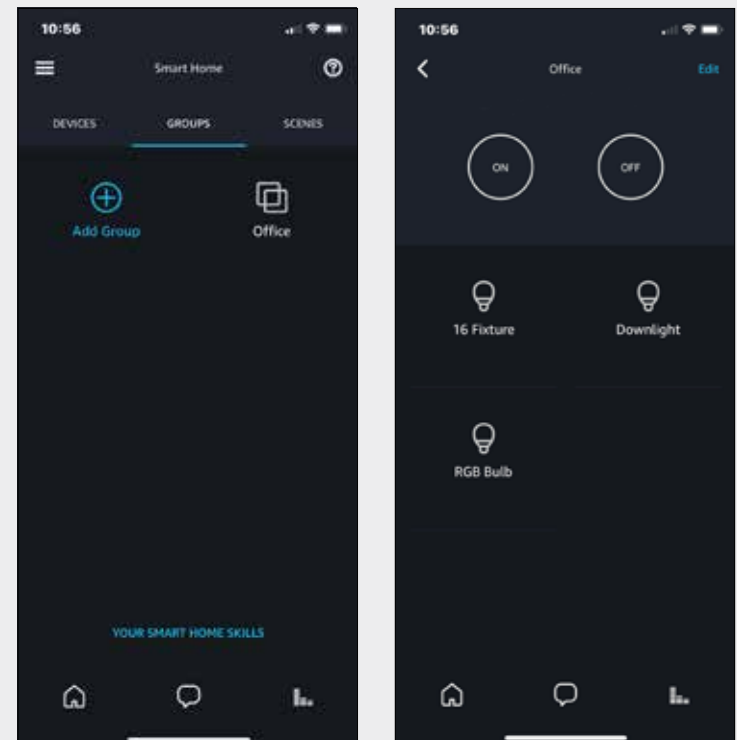

- 15 | Select a preset name or create your own name and then **NEXT**.

- 16 Select your Alexa device, then select which devices you would like to add to this group. Once you've selected all the desired devices you would like added to that group, select **SAVE**.

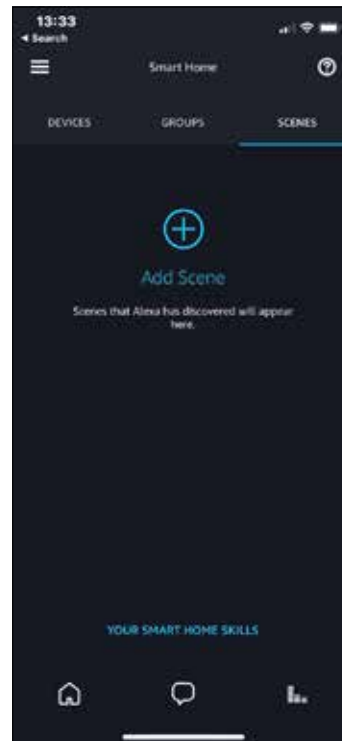

For Example, here is a group called "Office" that has the following lights included in the group: 16 Fixture, Downlight, and RGB Bulb. You can now control all the lights at the same time using the call out "Office". This will allow you to change the color of all lighting in the group (as long as the Smart light has the called out functionality) at the same time as well as turning the lighting On and Off.

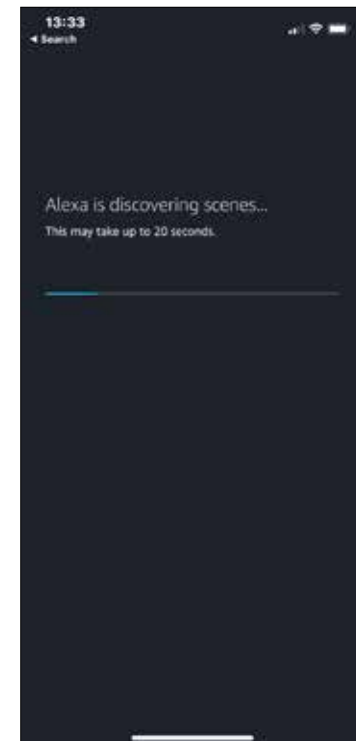

- 17 You have now successfully added a group. Now you can ask Alexa to turn off your office lights, and all the lights in that group will turn off.

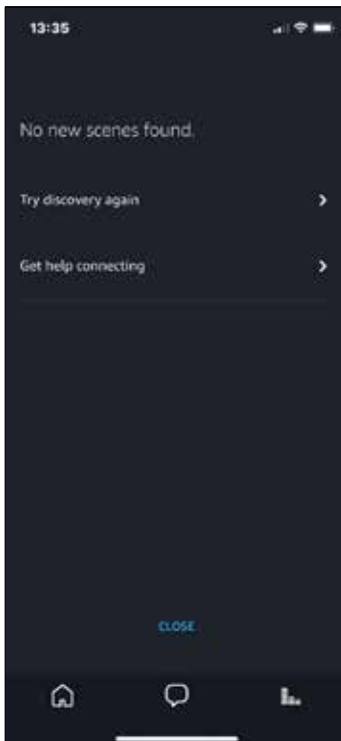

- 18 To add SCENES, navigate to the **SCENES** tab near the top.

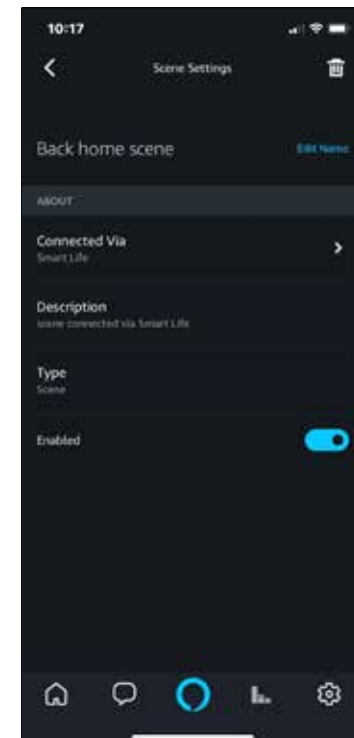

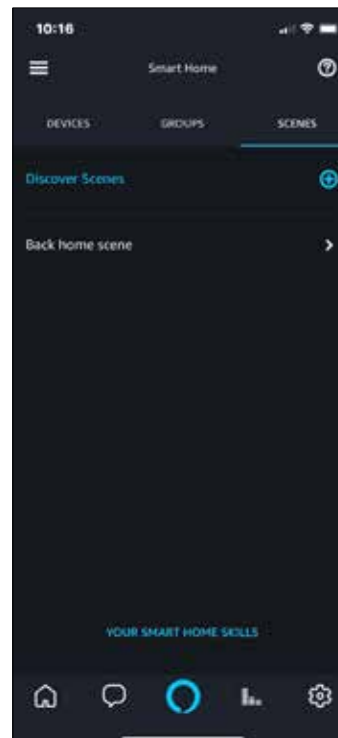

- 19 Once you select **Add Scene** the app will sync the scenes you have created in your Smart Life app.

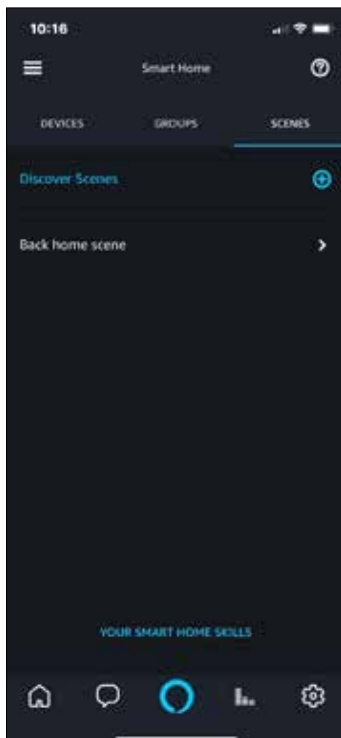

- 20** | If you do not have scenes in your Smart Life app set up, you will get the message below.

- 21** | Additionally, you can turn on and off all of your connected lights, regardless of scences, with the following commands: "Alexa, turn on all lights" and "Alexa, turn off all lights."

- 22 | Your Smart light is now set up and ready to use in the Smart Life app.

Thank you for choosing Hamilton Hills! Customer satisfaction is our TOP priority, please let us know how you felt about your experience.

Happy? We are so happy that you are pleased with our product. Feel free to express your newfound joy! Share your experience by writing a review on Amazon.
