

Assembly Instructions

Fitting the stone top to the Double Fridge

A stainless steel mounting bracket, 2x 1/4x5/8 screws and 2x self tapping screws are provided to secure the stone top to the fridge.

The bracket is mounted to the underside rear of the stone top, using the 1/4x5/8 screws into the threaded inserts located in the steel bracing tubes. Note, the rear holes are positioned closer to the edge of the stone top than the top holes. The bracket is positioned with the vertical face towards the front of the stone top.

With the bracket in position, the stone top can be lifted onto the fridge (This is a two person job). The bracket sits at the top rear of the fridge, and is secured using the self tapping screws into the holes located at the top corners at the rear of the fridge.
