

# Christmas Tree Project ASSEMBLY INSTRUCTIONS

1. Shape and texture each piece prior to assembly. Use various hammers and texturing tools to add dimension to your tree.

2. Be creative and make your tree unique. Using the edge of your anvil to bend the pieces will help add shape and dimension.

3. If you'd like, use a metal stamp to personalize the tree.

Any hammering you do to the tree cause stretching, which will close up the slots.  
If the slots on your tree are too tight, heat up the top center area and use your hands to spread apart.  
If the slots are too loose, hammer up the sides of the tree to stretch and tighten.

4. To assemble, slide Part B over Part A then slide Part C over the top  
5. Make adjustments as needed.  
You're finished! Great job!

## Optional Add-Ons:

Letter Stamps

Small Chisels

Coming Soon:  
Letter / Number Stamps
