

GenderCat.com

To select a color sample:

Throughout this process please be careful not to mix up which colors are which. You will need to let us know the number associated with the color you select! 😊

Please email your selection to yourbetterproduct@gmail.com

To select a skin-tone match for attachment tabs on packers or main color of breasts:

Select a sample you think is close to your skin tone.

Remove samples one at a time and place them on your skin where the prosthetic is to be placed. When it blends, you know you have found your skin-tone match.

😊 Do not be afraid to keep looking if you haven't found a good match! That's why we send them to you! 😊

You are also welcome to select colors for nipples on breasts, and the shaft, balls and head on packers in addition to your tab selection. 😊

(Please note: if you have ordered one of our Anchor prosthetics, these do not come with an attachment tab – instead, your skin tone selection will be used for the color of the shaft!)

Write down your selection and keep it in a safe space

Remember: lighting can have different effects on colors. We recommend selecting your color in the lighting you are most

likely to be seen in :)
