

ThermoFlex[®] PLUS

PLUS is a product of Poli-Tape

Cotton, Polyester,
Fabric blends, Spandex,
Lycra, Wool, Linen
NO Nylon

Medium to Firm
Even pressure

330° - 335°F

PEEL WARM
Peel warm
or cold

17 - 20
seconds

Withstands medium
to high wash & dry
temperatures

Create art and plotter-cut
in mirror image.

Create plotter file
in mirror image

Cut mirror image on
plotter and weed design

Position weeded
design on shirt

Place Teflon sheet or
silicon release sheet
over design

Medium Pressure
330° to 335°F
for 17 - 20 seconds

Rub design with pad or
chalkboard eraser while still
hot to dissipate heat

Remove backing
after cooling

Repeat process
for 2nd layer

Completed shirt

Continuous testing by the manufacturer and numerous users has established ideal temperature and time to be lower (330° - 335°F for 17-20 seconds) than our previously published specs (345° - 350°F for 20 seconds). Both conditions work well. The higher temperature may require a longer (step #6) cooling period to allow the thermoplastic adhesive to solidify prior to peeling the polyester backing.

All technical information and recommendations are based on tests we believe to be reliable. However, we cannot guarantee performance for conditions not under manufacturer's control. **Before using, please determine the suitability of product for its intended use. ALWAYS TEST PRIOR TO RUN.**

The user assumes all risk and liability whatsoever in connection with the use of this product.

Seller's and manufacturer's only obligation shall be to replace such quantity of the product proved to be defective by manufacturer.
