Develop a Superior Screen

The Ajax-D is Simply a Better Solution

The Lawson Ajax In-Line Screen Developer provides a fully automated screen developing system. Traditionally, emulsion-coated screens are exposed, and then washed and rinsed by hand to reveal the image. This labor and skill intensive process depends exclusively on the operator's ability to consistently control water spray patterns both vertically and horizontally, apply water pressure consistently and pay attention to details and time spent rinsing. These variables are inherently impossible to accurately and successfully control when executed by people, no matter how well intended or experienced that person may be.

The Lawson Ajax In-Line Developer is the first to: 1) Simplify the Drive-Train Mechanism for easy access and maintenance 2) Dramatically Reduce the Floor Space Required 3) Be Affordable, so this technology can be used by small and medium size shops.

ST. LOUIS | ATLANTA | NATIONWIDE

STANDARD FEATURES

- All Stainless Steel Construction
- All Electric Control System
- Integrated Safety System
- Multiple Pressure Jet Nozzles
- Easy Side In-Line Loading
- Self-Draining Tracks
- Clean Any Screen up to 25" Tall
- Low-Maintenance
- 1-Year Parts Warranty
- 120 Volt; Plug-In Wiring
- Pre-Soak Dip Tank
- Exit Backlit Inspection/Wash Sink
- Auto Drain Filtration System

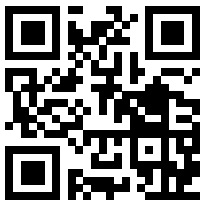

In-Line View

Control Panel

OPTIONAL FEATURES

- Explosion Proof Wiring and Control Box
- Extra Long In-Feed or Exit Track
