DESCRIPTION

The Lawson Expo-Light is a specially designed balanced-tube exposure unit. It is great for exposing a wide variety of t-shirt screens – both line copy and halftones.

The Expo-Light is compact enough to be easily moved anywhere and uses standard 120-volt, plug-in wiring. The Lawson Expo-Light is fast, consistent and reliable.

Lawson's exclusive instant vacuum draw-down provides positive film-to-screen contact for high resolution exposure. This is a feature that cannot be duplicated without a vacuum. In addition, the Expo-Light's dynamically balanced and focused-beam fluorescent tube system helps ensure good, clean stencil definition, screen after screen.

To add versatility, the Expo-Light can also be used as a light table. Simply place a durable, high-density piece of translucent fiberglass over the glass exposure surface, flip a switch, and you now have two machines in one!

OPTIONAL FEATURES

- Digital Timer
- Floor Stand
- Shelves
- Wheels/Floor Casters
- Blacklights
- Spare bulbs
- Frames
- Parahex Louver Grid
- Export Electrics
