Lock-N-Go Registration System with Screen

## Patented Registration in Seconds

Lawson Screen & Digital Products' Lock-N-Go Registration System revolutionizes the on-press registration process. The Lawson Lock-N-Go system allows for the simultaneous registration of multiple screens at one time, eliminating the need for the press operator to register one screen at a time. The Lock-N-Go is so unique, innovative and revolutionary that Lawson was awarded a U.S. Patent.

One of the most critical and time-consuming pre-press steps is registering multiple color jobs. Originally, the press operator manually printed and aligned each frame, color-by-color, a slow, costly and labor intensive process. Newer three point registration devices require mounting to a single platen, but each color must still be set one by one at the station where the device is located. Such a process is still slow, taking ten or more minutes. For a shop with many change-overs per day, this equates to a lot of wasted downtime.

Lawson's Lock-N-Go system is revolutionary since it mounts to each print head and registers each screen at its own print head. This eliminates the need to have a "centralized" registration location.
