The Lawson
VC-FILTRATION
System

Keep Your Shop Clean & Green

The Lawson VC-Filtration System is an environmentally necessary product that removes harmful waste from the screen cleaning process. It protects your plumbing and the environment by filtering out contaminants like emulsion, tape, ink particulates and other harmful solids. Water from your washout sink flows through a multi-stage filtration management system, specifically designed to trap harmful solids and particulate matter from entering your plumbing and your drain system. The VC-Filtration Unit is mounted on industrial casters, so the unit is easy to roll under your washout or reclaiming sink.

The filtration management system filters the water through triple tiered filters to output the cleanest water possible. First, the water goes through a course mesh screen to immediately remove large particulates. The water then flows through a media filter, and finally, a fine mesh screen before flowing into the holding tank where it automatically triggers the high powered sump pump.

This design is superior to other filtration devices because the media filter is cheaper and easier to clean than cartridge/cylindrical style filters. Additionally, everything is easily visible, allowing you to see when it is time to clean the filter.

STANDARD FEATURES

- Stainless Steel Construction
- Multi-Stage Filtration
- Roll Filter Media
- Manual Media Winder
- Green Filter Mat
- 110 Mesh Filter
- 200 Mesh Filter
- 20 Micron Media Roll Filter
- Industrial Casters
- Recommended for Shops Processing 10 - 125 Screens per Day

OPTIONAL FEATURES

- Replacement Filter Media Roll (12" x 250'): #715-267-5-EA
- Replacement Screen Filters
- Fully Automated Systems that Features Automatic Filter Cleaning are Available
- Custom Designs and Features on Request
