

SmartVET

Protect your most important asset – your business!

Your RTO depends on the people you employ. Their knowledge of the VET sector and the actions they take have a direct impact on the compliance of your organisation.

SmartVET PD online courses and process implementation services are built for RTOs. The aim of this range is to provide your RTO staff with the skills, knowledge and tools to improve and implement processes within your business.

SmartVET Knowledge (SVK)

SmartVET Knowledge Online Courses are designed to give both new and experienced RTO staff the background knowledge of the VET sector and the responsibilities of a registered training organisation to ensure ongoing compliance and quality of service.

Participants will get:

- 30 days access to the online course material.
- Useful downloads for later reference.
- A certificate of completion.

SmartVET Skills (SVS)

These programs focus on teaching or enhancing the skills and knowledge required to complete a specific task within an RTO. The structure of the course is to guide learners through the process, applying it to their own material/organisation as they go.

Resources, documents, templates and information are provided to support the process. This is followed by a tailored Q&A session where participants can ask about anything that they found difficult to implement.

Visit our website for more information and a list of the available courses
