

# RED WITCH

*analog guitar effects pedals*

## The FUZZ GOD IV

My heartiest congratulations to you for purchasing a Red Witch FUZZ GOD IV!

Prepare to unleash even more of your omnipotence!!

The device you are now holding in your hands offers several unique features, which you cannot find anywhere else. I strongly recommend that you read on to discover the full potential of your new pedal!

### Controls

**Volume** - This controls the output Volume - convert the masses quietly or with blasting trumpets (err, guitars). You will find that as you turn the control through the last 20% of its rotation a treble boost is added. Sizzly!

**Fuzz** - From a gentle break up to a singing beam of fuzz - you decide!!! Wind back your guitars volume control to clean things up. When the sputter control is counter clockwise, this control will crackle a little when turned, - it's ok, don't be alarmed, there's nothing to be afraid of.

**Wrath** - All gods have it and the Lord of the Fuzz is no different - click this only to smite the most brazen of unbelievers.

When engaged (by depressing the lightning bolt foot switch) you can dial up all manner of destruction; SubOctave Thunder, eternally sustained notes, squealing high frequency note corruption and a myriad number of other terrifying tones. Utter Madness.

This control interacts with the fuzz and sputter control. Try adjusting you guitars volume as well to open an even broader palette of chaos!! We recommend that you disengage this control when bypassing the pedal - to avoid any possibility of bleed oscillation.

**Sputter** - Choose from a smooth singing fuzz to a ragged, rough, spitty gated mess and anything in between. This control allows you to set the units "sweet spot". You'll find that spot between 12 o'clock and 5 o'clock . Ragged spittsville kicks in between 7 o'clock and 11 o'clock. You'll find that it's best to tweak this sweet spot each time you set up to play. The wonders of magical Sinful Silicon goodness! This control will crackle when turned - it's changing a dc bias - and that's ok.

**Awaken** - A super sturdy true bypass switch to engage the Fuzz God effect. - LED Glows Red

**8ve** - Engages a searing Octavia effect - you can preset with the internal, left hand blue trim pot - counter clockwise for more, clockwise for less. - LED Glows Blue. Only engage-able when Fuzz activated (will glow purple when used with Fuzz).

**Lightning Bolts** - Engage this foot switch to incur the wrath of the Fuzz God - crazed Oscillation and octavization effects. - LED Glows Green *Only engage-able when Fuzz activated (will glow amber when used with Fuzz).*

**Lightning toggle switch** - Engage this to choose from maximum gain ( right position) or your preset gain (toggle left left - gain determined by the position of internal DIP switches 6,7 & 8).

**Ear toggle switch**- Engage this switch to choose from your preset tone response ( right hand position - tone determined by the position of internal DIP switches 1-5) or for flick the switch to the left to bypass the presets for maximum bite!.

**Internal trim pot right hand** - inside your unit you'll see a Blue trim pot with a phillips head screw slot in it's back, labelled VR3 on the right hand side. This adjust the master bias on the transistors. Make it more smooth or spitty with this control.

**Internal trim pot left hand** - inside your unit you'll see a Blue trim pot with a phillips head screw slot in it's back, labelled R15 on the left hand side. This adjust the output gain of the Octavia section - fully counterclockwise to slam the front end of the fuzz section with Octavia - or turn clockwise to back it off.

**Internal 8 position DIP switch** - inside the unit you will see a red, 8 position DIP switch. Switches 1-5 affect tone, when the Sun icon toggle switch is in the right hand position. Switches 6-8 affect gain when the external left hand toggle switch is in the left hand position. Go to [www.redwitchpedals.com](http://www.redwitchpedals.com) and click on FUZZ GOD IV to download a PDF of recommended settings for the DIP Switches ☺

**POWER** - The Fuzz God IV is powered from an external nine volt adapter (Boss PSA styled is ideal - though anything with a 2.1mm barrel plug with a negative center pin is fine.).

Keep it clean - only use a soft dry cloth on your pedals finish - abrasives will ruin the finish and speed up the wear on the lettering. The lettering will wear off eventually, be prepared for this - ensure you have enough canned goods and fresh drinking water

Do Not Treat it rough - This includes; immersing it in beer or other liquids, throwing it at stuff or people, rewiring it, setting it on fire or using it as a weapon. It is a tough pedal but everything lasts a little longer with a little love.

Red Witch Analog Limited Lifetime Warranty

All electronics carry a lifetime warranty providing the owner purchases the pedal new and retains proof of purchase. All switches, jacks, potentiometers and other mechanical parts are warranted for one year after the date of purchase or for two years when the owner returns the following information to [warranty@redwitchanalogpedals.com](mailto:warranty@redwitchanalogpedals.com) Name of purchaser, date of purchase, Location of purchase,

Your email address and pedal serial number. As well as an extension of your mechanical warranty you will be informed of new pedals and other guitar gizmos as we invent them! All external fixtures finish, lettering and knobs are not warranted.

Damage or failure of product due to misuse will void the warranty. All repairs must be made by Red Witch Analog only.

Unauthorized repair/modification will result in void of

Warranty - if it broke, let us fix him.
