

lumi book

lumi #01

Inspired by the simple action of opening and closing a book, lumi book provides two lighting entities which are hinged together allowing each face to be repositioned in relation to the other. The design of the book allows it to be stood on its faces or edges.

The principle usage of lumi book is to create ambient lighting to a space by gently washing walls and ceilings and highlighting objects. Available in two light options, white and spectral white. Spectral white filters the light through coloured lens caps to create 'white' light.
