# Converter losses to EN 50598-2\*

| Efficiency class                               | IE2      |
|--|----------|
| Comparison with the reference converter (90% / | -65.06 % |

The percentage values show the losses in relation to the rated apparent power of the converter.

The diagram shows the losses for the points (as per standard EN 50598) of the relative torque generating current (I) over the relative motor stator frequency(f). The values are valid for the basic version of the converter without options/components.

\*converted values
