In firmware V4.7 and higher, due to legal requirements, the maximum output frequency is restricted to 550 Hz.

## **Overload capability**

#### High Overload (HO)

2 × rated output current during 3 s, followed by 1.5 × rated output current during 57 s, during a cycle time of 300 s (110 % on average)

25% <b>26.0</b> W (1.20 %)	26 W (1.23 %)			
	50%	90% f		

The percentage values show the losses in relation to the rated apparent power of the converter.

The diagram shows the losses for the points (as per standard EN 50598) of the relative torque generating current (I) over the relative motor stator frequency(f). The values are valid for the basic version of the converter without options/components.
