YOU CAN FIND THESE HOOKS WITH THE INSTRUCTIONS!

Deep hanging bar(white)x8 (with 16 deep hooks)

Shallow hanging bar(white)x4 (with 8 shallow hooks)

Assembly Instructions

Step1: Construct metal tent frame by assembling A/B/C metal poles and corners/ connectors as per diagram above. To avoid damage, it is most important you check that all the poles are pushed completely into each corner joiner. Failing to do so will not only make tent cover difficult to fit but may stretch the seams and will allow emissions of light from a functioning tent.

Step2: Un-zip the H-shaped zippers all the way, LEAVE THE U-SHAPE REAR DOORS CLOSED.

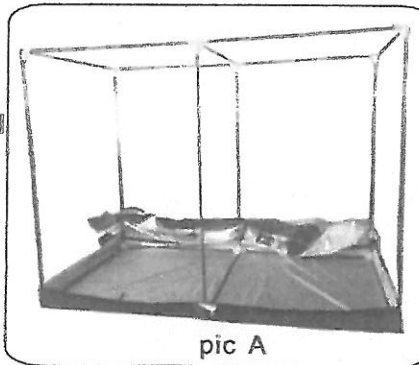

Step3: Locate tent's base. Slip base section of the tent cover beneath metal frame. Place neatly and carefully over the corners of the metal frame. (REFER pic A.)

Step4: Then, go on doing the same for tent's roof over the top of the frame. Before you pull the last side of the tent roof down. (REFER pic B)

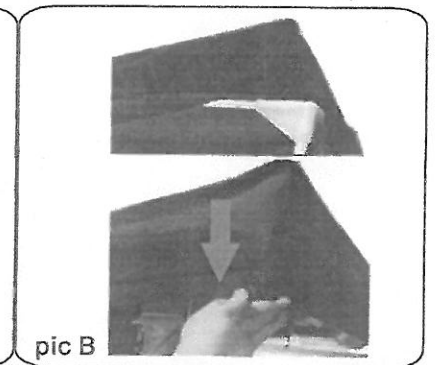

Please be sure the other three sides are in right position. <THIS GROW TENT CAN ALSO BE ASSEMBLED FROM THE ROOF!> After that, your grow tent will be like pic C.

Step5: Close up the H-shaped zippers carefully. You may have to push the upright poles in a bit when you zip-up around each corner. It is done! REFER pic D.

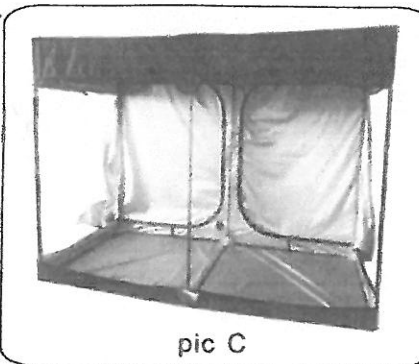

Step6: Attach water tray on the bottom with Velcro and hanging straps on hanging bars. And you are ready to grow!
