

furniture care instruction

cleaning and caring for your M|W wood & metal products

To care for your wood furniture, take a “less is more” approach. For regular cleaning a damp cloth is best. Add a little mild soap if necessary, but do not saturate the piece with moisture. Cleaning products containing ammonia or with a high pH will damage any finish product, causing the finish to soften over time. You should only use cleaners with a neutral pH if you must use one at all.

Window cleaning products such as Windex or common kitchen counter sprays should never be used on any wood furniture. Their use will void any warranty expressed or implied. Avoid using any furniture polish containing silicone, such as Pledge, as these products will cause problems should your piece need refinishing at a later date.

We recommend Guardsman brand furniture polish, available online at www.guardsman.com.

Thank you for your patronage.

Sincerely,
The M|W Team
