

SmarterFresh Hand Held Bidet Sprayer Head Only – Model SF-SS50

Warning Message:

Sprayer Head must be used with a Shut Off T-Valve Adapter to cut off water supply when not in use. If you choose to not turn off the valve lever when not in use, you risk weakening the internal components of the sprayer and hose, or exposing your home to water damage or flooding. Manufacturer is not responsible for damage which may have been caused by failure to follow this recommendation.

Installation:

- 1) Make sure T-valve adapter is closed off and flush out any remaining water from the existing hose by depressing the *Sprayer Head* handle.
- 2) At wall, turn off water supply valve.
- 3) Attach new *Sprayer Head* to existing hose, making sure the rubber washer is not worn or cracked and is lying flat at end of hose.
- 4) At wall, turn on water supply valve.
- 5) Open the T-valve adapter, checking for leaks at the connection of the hose and sprayer head.
- 6) Direct the hand held sprayer in appropriate direction and press the *Bidet Sprayer Head* lever to release flow of water, again checking for leaks.

Operation and Usage:

Water spray is adjustable and will spray with high or low force (jet spray vs gentle rinsing) based on how much depression is placed on the *Bidet Sprayer Head* lever.

Troubleshooting:

If leaking occurs at *Sprayer Head*, disconnect sprayer from existing hose and unscrew the "cap" of *Sprayer Head*. Use a screwdriver to turn the exposed screw counter-clockwise about a half to full turn. Each sprayer will vary the amount of adjustment they need, so please test. Then make sure the cap is screwed on tightly. Check for existence of *rubber washer* or that the washer is lying flat and deep in hose. Tighten hose to sprayer head.

Warranty: *Bidet Sprayer Head* = 1 year.
