## YAMAHA ZUMA 50F

Full Exhaust System with Hurricane Canister

Part # 005-31701-HU

### Parts List

Qty.	Description	Part Number
1	Hurricane Muffler Canister	005-S1RSKULL
1	Header	005-31701H
1	Muffler Clamp	005-R37522-10
1	HARDWARE KIT	005-317-3
1	Ruckus Vale Adapter	005-245-S1
2	8x25mm Socket Head Cap Screw	005-SH825
1	8x16mm Flange Bolt	005-FB816
1	8mm Flange Nut	005-FN8
1	YAM Zuma 50 Mounting Bracket	005-317-B
2	M8 Split "High Collar" Lock	005-WL8
2	45mm Springs	005-S45

### IMPORTANT - PLEASE READ CAREFULLY

*We recommend that this performance part be installed by a qualified motorcycle technician. If you have any doubts as to your ability to install this performance part, please consult with your local motorcycle dealer. Read all instructions first before starting installation. Make sure the motorcycle and exhaust system are completely cool before starting the installation. Also, make sure the bike is secure on a centerstand or ideally a service lift during installation. Be sure to save all stock components for possible use later.*

### Installation Instructions

1. Make sure the bike is completely cool before starting the installation. Make sure the bike is secure on a centerstand or ideally a service lift.
2. Remove OEM exhaust assembly.

3. Remove gasket between header pipe and cylinder head. This gasket will be used with the TBR header.
4. Install TBR mounting bracket using the supplied 8x25mm socket head cap screws and lock washers.

5. Install TBR Header pipe using the OEM gasket between header pipe and cylinder head, use OEM nuts.

6. Install adapter to header then install TBR muffler and muffler clamp and retain it with the supplied 8x16mm Flange bolt and nut.

7. Install supplied 45mm springs to muffler and header
8. You can either remove air induction hose from scooter or just attach to the socket head bolt on the muffler bracket.
9. Double check your work.

10. Before you run the bike, clean off all fingerprints and dirt, as any oily residue will etch the metal and become somewhat permanent when the system gets hot. Run the bike and enjoy. It is normal for some white smoke to appear the first time you start the bike. This is packing/manufacturing oil from inside the pipe burning off. Check for gaps or leaks. If you find a leak, a little high temperature silicon sealant should fix it. After 50 to 100 miles, recheck all fasteners for tightness.

## Care & Cleaning / Warranty
