Auckland

Product Stewardship Policy

Here at Project Floors we recognise how important our environment is. With this in mind we do everything we can to limit our impact upon it. Working with our suppliers to create products that are both fit for purpose and that cause minimum environmental impact.

We are committed to taking into account the environmental situation with every corporate decision. This involves the diligent use of all resources in terms of sustainable value orientation, production or water and air quality and reduction of waste throughout production.

We offer all our carpet tiles with the option to be manufactured using Econyl regenerated yarn, which is manufactured from nylon recycled from fishing nets that have been recovered from the oceans. This puts an end to unnecessary waste of polyamide material and creates product from waste in a continuous loop. The production is in accordance with the most significant environmental management system worldwide (ISO 14001:2004)

The EcoTx backing is made using recycled carpet tiles and the supplier is certified Green Label Plus, LEED v4 EQ Credit Low-Emitting Materials (VOC)

They are supplied to us in recyclable cardboard packaging.

All carpet tiles that is uplifted and able to be reused we offer as donations to community projects in NZ and the Pacific Islands where possible.
