

1 Check the size accuracy of printed page

Use a real ruler to make sure it matches exactly with this printed ruler scale. There should be **no more than 1mm** margin of error at the end of the ruler.

! If this page was not printed to scale then you may end up with the wrong shoe size

2 Fold the lower left corner along the dotted line

Place the paper on the floor with this edge touching a wall. Use a room with a hard floor, not carpet, and avoid floor molding that will push the paper away from the wall. Tape the paper to the floor

3 Stand on the paper with the back of your bare foot barely touching the wall.

Your foot should be perpendicular to the wall and your weight should be down on this foot.

4 Note the first line your longest toe does not cover or touch.

This is your recommended shoe size! Sizing can vary for personal preference. If you are close to two sizes, consider whether you prefer shoes to fit snugly or loosely.

This line should be perpendicular to the wall.

Fold along dotted line and align this edge against wall.

Example

Foot size: 41
