ELEVATION™ SERIES GAS FIREPLACES

ELEVATION™ SERIES GAS FIREPLACES
napoleon.com

Elevation™ Gas Fireplaces. Limitless Possibilities.

Napoleon's most versatile series of gas fireplaces, the award-winning Elevation™ provides you with an elegant fire element allowing the flame's radiant glow to enhance any room.

Napoleon's innovative Bluetooth enabled **eFIRE** app can be accessed from your mobile device and used to control everything on your fireplace (flame height, LED ember bed colors, blower and more).

The Elevation™ Series offers a full viewing experience coupled with a series of authentic logs that make for a truly impressive display of fire. A full range of media and accessory options ensure that each model can be unique to each homeowner. With the addition of heat management there is reduction of clearance to combustibles, meaning sensitive equipment like televisions, sound bars and artwork can be placed closer to the fireplace enclosure thanks to drastically reduced temperatures above the fireplace.

Heat Management

Heat Management serves many purposes and offers several benefits. With our innovative systems, easily install your television, electronics and sensitive artwork closer to your fireplace, increasing design flexibility. These industry-leading technologies offer a more effective and quieter solution than standard blowers and operate without power. For a simpler installation, heat management reduces clearance to combustibles and allows for an easier installation of mantels. Finally, cooler glass and walls near the fireplace ensure that you and your family can safely enjoy the comfort and light of a gas fireplace. With our Heat Management Solutions, you control the heat.

UNIVERSAL HEAT MANAGEMENT (UHM/UHMF)

Using a set of ducts, the heat is efficiently circulated around the room instead of blowing directly from the front of the fireplace. Operating without the need for electrical or blowers, this is a silent system which is ideal for spending quality time with your loved ones watching a movie or reading. UHM lowers clearances for combustibles and allows for the safe installation of electronics above the fireplace.

*Compatible with the Elevation™ Series

DYNAMIC HEAT CONTROL (DHC)

No ducting, fans or power required to circulate the heat ensuring silent operation. Allows you to design and build your space, completely integrating a fireplace into the décor with true zero clearance to combustible materials. An industry-leading system that has been designed for your TV or artwork to be installed directly above the fireplace.

* Compatible with the Elevation™ X Series

HOT AIR DISTRIBUTION KIT (LHAD)

Effectively moves warm air from the fireplace into a different room using flexible ducting. For rooms where the fireplace is at one end of the room, LHAD moves the heat to other areas within the space.

*Compatible with the Elevation™ X and Elevation™ Series

DYNAMIC HEAT CONTROL PLUS (DHC+)

Add the DHC+ to your DHC system for a powered solution that allows heat to be pulled from the fireplace enclosure and directed to any living area in the home that needs it, including outdoors when not needed inside your home. This system is as quiet as a bathroom fan. Easily install a TV above the fireplace.

* Compatible with the Elevation™ X Series

FOCUSED ON VERSATILITY

Engineered to optimize air flow both through the appliance and enclosure to reduce surface temperatures, this system allows for more versatile installation opportunities allowing for increased comfort. See below for examples of the Dynamic Heat Control[™] Fireplace installations options for virtually limitless possibilities.

Stopping shy of the ceiling allows rising hot air to escape freely from the top of the enclosure and into the room.

Uses an air outlet opening that will be built into the front of the constructed enclosure, at the top, centered above the appliance.

Stopping shy of the ceiling, allows rising hot air to escape freely from the top of the enclosure and into the room.

This style of enclosure includes an air outlet opening that will be built into the rear of the constructed enclosure above the appliance.
