Virtual 3D Surround Technology

3D virtual surround creates a complete sound experience. "DTS Virtual: X" is a virtual 3D surround mode that reproduces height direction in addition to front / rear and left / right. As a result, the sense of unity between the video and audio is improved, and in addition to the front-back and left-right spread, you can feel the sound that surrounds you from above, further improving the immersive feeling in the world of movies and music.

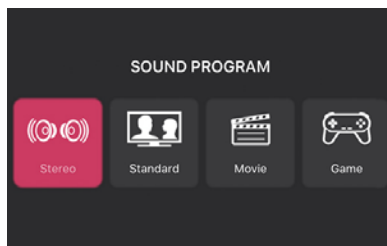

Clear Voice

Have you ever found it difficult to hear voices or lines from announcements and song vocals? With Yamaha's clear voice function, you can automatically distinguish human voices such as dialogue and narration from other sounds, increasing the volume of only human voices. Even in movies, dramas, news programs, and music where Back Ground Music and sound effects have been used abundantly, the human voice is clearer and easier to enjoy.

4 Sound Modes

You can enjoy the sound of movies, music, TV programs and games with Yamaha's optimal sound modes. Select from four options (Stereo, Standard, Movie, Game) designed to suit your content. Stereo mode to match stereo playback of music, Standard mode for most TV programs, Movie mode for movies to enhance space expansion, and Game mode to immerse yourself in gameplay content allowing for individual sound action localization to be clear and precise.

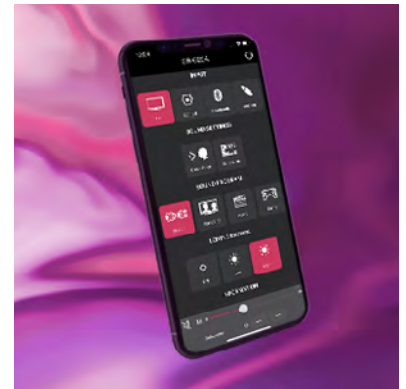

Rich Bass Reproduction (Built-in SW x2, Bass Extension)

Dual built-in 75 mm (3 ") subwoofer unit combined with the dual bass reflex port, provides a rich and spacious bass range. The 55 mm (2-1 / 8") woofer unit x2, 25 mm (1 ") tweeter x2, further achieve a well-balanced and spacious sound quality combination from low range to high range.

Sound Bar Remote App

With the newly developed Sound Bar Remote App its even easier to control your entertainment. The App can switch contents, sound modes, clear voice and bass extension functions and simple power on / off commands intuitively and easily from your smartphone / tablet.

Key Hole for Wall Mounting
