

# THORENS TD 1600

---

## THE RETURN OF THORENS DNA

Thorens TD 1600 combines the brand's tradition of the past with 21st century's technology. Externally quite similar to former famous 160 series with classical wooden plinth, two-part platter with inner belt and thick rubber mat, arm board and acrylic dust cover, it contains a lot of innovations inside.

The conical springs for sub chassis are not mounted on the top board any longer, but standing on the bottom. Additionally, a small but strong tightened thread made of steel connects sub chassis with a steel pin on the bottom and so prevents the sub chassis from wobbling and allows only vertical movement.

A powerful control unit takes care of motor speed.

## SPECIAL FEATURES

---

- Stabilized sub chassis on three conical springs
  - Polished precision belt
    - Two part platter
  - Adjustable belt tension
- Electronical controlled motor
- Thorens precision tonearm TP 92 9°
