

WATTSHOP

The Relentless Pursuit of Speed

Compatibility Guide

Whilst we endeavour to keep the compatibility guide up to date we are aware certain bikes and basebars will be missing from this list. The important information to bear in mind.

1) The adjustable risers only tilt the armrests as a standalone item. Pairing the risers with the pole clamps tilts both the armrests and extension poles.

2) The adjustable risers and extensions both require a flat top riser stack.

3) The basebar requires a traditional steerer tube mounting. In the majority of instances split fork steerers will not be compatible.

If you are unsure of compatibility please email a photo of your cockpit to info@shopforwatts.co.uk and we can clarify.
