

# Fermenting Chicken Feed

## STEP-BY-STEP GUIDE

1

### MEASURE THE FEED

- Approximately 1/2 cup per bird
- Determine the total amount and cut it in half
- Feed expands as it ferments

2

### ADD WATER

- Add enough water to cover the feed by 2 inches
- Use non-chlorinated water

3

### GIVE IT A STIR

- Stir together the feed and the water
- Use a wooden spoon, don't use metal!

4

### COVER

- Cover the jar with a breathable cloth like cheesecloth
- Use a rubber band to fasten the cloth

5

### STIR DAILY

- Stir the feed at least 2-3 times each day
- It will take 3 days for the feed to ferment

6

### WHEN IT'S DONE

- There should be bubbles on the top of the feed
- Strain out the feed into a bowl

7

### SERVE!

- Serve to your flock topped with Grubbles!

### TIPS:

- Throw out the feed if you see or smell mold.
- Always have the feed covered in water.
- While the feed is fermenting, keep it in a cool, dark location

### 3-6 HOURS

Add more water until the feed is covered again.

### 24 HOURS

You may start to see some bubbles on the top!

### 48 HOURS

The feed may rise and you will see fermenting bubbles.

### 72 HOURS

Bubbles will be on top and the feed will smell slightly sour!
