

The ANFIM SPII Grinders will be busy in the engine room grinding coffee for the eight espresso-based categories at the 2018 Golden Bean competition and conference.

With ten categories on offer the Anfim Grinders can expect to dose close to 5000 shots of coffee during prep and delivery to the judges.

We look forward to seeing you at the event!

Representing ANFIM and joining our team at the event will be three members from Hemro Group. Head of product development & innovation, Daniel Hofstetter, will deliver a presentation workshop on Friday 23/11/18.

What will be covered in the Anfim workshop?

“Today’s coffee industry is buzzing with information. It gets more and more difficult to extract the relevant principals to improve his/her own coffee skills or the quality of a coffee business as such.

Equipment manufacturers face the same issue. In order to make their equipment better some leave no stone unturned. Find out what Anfim does in terms of scientific research and development, to find out how to make the best espresso. Brace yourself for a lot of data and see how championship winning equipment is pushed to the next level.”

– Dan Hofstetter, Head of Product Development
