

HOW TO MEASURE YOUR HEAD SIZE

Most of our wig styles can stretch larger or be tightened with the inside adjustment hooks. Some specialty styles do not have the same versatility and come in a small and large size. Use a tape measure around your entire hairline to determine which size will be a closer fit for you!

Note: Specialty ponytail wigs have a similar cap circumference between both sizes, but their depths are much different. The depth is also flexible based on the ponytail/s tightness. For the best fit, re-secure the ponytails with some sturdy hair elastics while wearing the style.

21

22

23

21" HEAD SIZE

We recommend going with the smaller size! If your head size is smaller than 21 inches, you may want to sew darts into the style for a more snug fit.

22" HEAD SIZE

Either size may fit. If your hair is extra long or super thick, you might prefer the larger size. If you have shorter or thinner hair, you may prefer the small size.

23" HEAD SIZE

We recommend going with the larger size! If your head size is larger than 23 inches, you may cut open a spot behind each ear, and bridge the gaps with some elastic or fabric.
