2010-2012 Dodge 1500 Mega Cab/ 2500 4X4 6"
Coil Spring Lift kit

This document contains very important information that includes warranty information and instructions for resolving problems you may encounter. Please keep it in the vehicle as a permanent record.

Box 1 of 3-PN # 56716B-1

Part #	Description	Qty.	Illus.	Page
DC601-1	PITMAN ARM	1	-	-
15-10995	BUMPSTOP	2	3	7
90-6029	HARDWARE PACK: Brake Line	1	-	-
15-10966	3/8" PLASTIC HOSE CLAMPS	4	-	-
13-20447	#10 X 1/2" HWH ZINC	4	-	-
91-2359	LOWER CONTROL ARM	2	4,5	8,9
90-6274	HARDWARE PACK: Upper Control Arm	1	-	-
15-11187	BUSHINGS LOWER ARM	8	4	8
90-2114	SLEEVE: .75" X .095" X 2.360"	4	4	8
90-6024	HARDWARE PACK: Sway Bar	1	-	-
70-0371501500	3/8" x 1 1/2" USS Gr. 5 Bolt	2	7	11
70-03725001500	3/8" x 2 1/2" USS Gr. 5 Bolt	2	7	11
72-03700100512	3/8" USS LOCKNUT	4	7	11
73-03700030	3/8" SAE FLAT WASHER	4	7	11
73-03700042	3/8" USS HARDENED FLAT WASHER	2	7	11
90-6312	HARDWARE PACK: SWAY BAR LINK	1	-	-
45359	HOURGLASS BUSHING	4	7	11
P-843	SPACER PACK	2	7	11
61150	3/8" SLEEVE	2	7	11
90-2039	SWAY BAR ADAPTER SLEEVE: Not Used	2	7	11
90-1010	SWAY BAR END LINK	2	7	11
91-2357	DODGE SWAY BAR END LINK	2	7	11
13-90330	U-BOLTS: 9/16" X 3.65" X 13.5"	4	B	17

**FOLLOWING PARTS ARE USED IN CONJUNCTION WITH THIS KIT.
THEY ARE PACKAGED AND MUST BE ORDERED SEPARATELY.**

COIL SPRINGS: 56160 (Diesel) For 56716 2010-2012 6" Coil Spring kit
COIL SPRINGS: 56170 (Gas) For 56716 6" Coil Spring kit

Transmission Brackets:

90-5140B	Transmission Drop Bracket: 2003-2005 (Gas)	1
OR		
90-5143B	Transmission Drop Bracket: 2006-2008 (Gas)	1
OR		
90-5146B	Transmission Drop Bracket: 2003-2005 (5.9L Diesel)	1
OR		
90-5149B	Transmission Drop Bracket: 2006-2008 (5.9L Diesel)	1
OR		
90-5152B	Transmission Drop Bracket: 2010-2012 (6.7L Diesel)	1

Optional Equipment Available from your Pro Comp Distributor!

50328 U-bolt kit for vehicles w/ Dana 80 rear axle.

Check out our outstanding selection of Pro Comp tires to
compliment your new installation!

- ⇒ Front end and head light realignment is necessary!
- ⇒ Speedometer and ABS recalibration will be necessary if larger tires (10% more than stock diameter) are installed.

TIRE INFORMATION:

Tire and wheel choice is crucial in assuring proper fit, performance, and the safety of your Pro Comp equipped vehicle. For this application, a wheel not to exceed 10" in width with a minimum backspacing of 3.25" must be used. Additionally, a quality tire of radial design, not exceeding 35" tall X 13.5" wide (for the 5" spacer kit) or 37" tall X 13.5" wide (for the 6" coil kit) is recommended. Violation of these recommendations will not be endorsed as acceptable by Pro Comp Suspension and will void any and all warranties either written or implied.

SPECIAL TOOLS:

- ⇒ PLEASE REFER TO YOUR SERVICE MANUAL FOR MORE INFORMATION.
- ⇒ A SPECIAL REMOVAL TOOL IS REQUIRED FOR SAFE REMOVAL OF THE TIE RODS.
- ⇒ A SPECIAL REMOVAL TOOL IS REQUIRED FOR SAFE REMOVAL OF THE COIL SPRINGS.
- ⇒ YOU WILL NEED TO PURCHASE NEW FACTORY CAM BOLTS FOR THE LOWER CONTROL ARMS.
- ⇒ THESE TOOL MAY BE PURCHASED AT YOUR LOCAL DEALER.
- ⇒ YOU MAY BE ABLE TO RENT ANY OF THESE TOOLS AT YOUR LOCAL PARTS STORE.

Introduction:

- ◆ This installation requires a professional mechanic!
- ◆ We recommend that you have access to a factory service manual for your vehicle to assist in the disassembly and reassembly of your vehicle. It contains a wealth of detailed information.
- ◆ Prior to installation, carefully inspect the vehicle's steering and driveline systems paying close attention to the tie rod ends, wheel bearing preload, pitman and idler arm. Additionally, check steering-to-frame and suspension-to-frame attaching points for stress cracks. The overall vehicle must be in excellent working condition. Repair or replace all worn or damaged parts!
- ◆ Read the instructions carefully and study the illustrations before attempting installation! You may save yourself a lot of extra work.
- ◆ Check the parts and hardware against the parts list to assure that your kit is complete. Separating parts according to the areas where they will be used and placing the hardware with the brackets before you begin will save installation time.
- ◆ Check the special equipment list and ensure the availability of these tools.
- ◆ Secure and properly block vehicle prior to beginning installation.
- ◆ ALWAYS wear safety glasses when using power tools or working under the vehicle!
- ◆ Use caution when cutting is required under the vehicle. The factory undercoating is flammable. Take appropriate precautions. Have a fire extinguisher close at hand.
- ◆ Foot pound torque readings are listed on the Torque Specifications chart at the end of the instructions. These are to be used unless specifically directed otherwise. Apply thread lock compound where specified.
- ◆ **Please note that while every effort is made to ensure that the installation of your Pro Comp lift kit is a positive experience, variations in construction and assembly in the vehicle manufacturing process will virtually ensure that some parts may seem difficult to install. Additionally, the current trend in manufacturing of vehicles results in a frame that is highly flexible and may shift slightly on disassembly prior to installation. The use of pry bars and tapered punches for alignment is considered normal and usually does not indicate a faulty product. However, if you are uncertain about some aspect of the installation process, please feel free to call our tech support department at the number listed on the cover page. We do not recommend that you modify the Pro Comp parts in any way as this will void any warranty expressed or implied by the Pro Comp Suspension company.**
- ◆ Disconnect the negative battery cable when working on the vehicle.

Front Installation

1. Prior to installing this kit. With the vehicle on the ground, measure the height of your vehicle. This measurement can be recorded from the center of the wheel, straight up to the top of the inner fender lip. Record the measurements below.

LF: _____ RF: _____

LR: _____ RR: _____

2. Ensure that your work space is of adequate size and the work surface is level. Set the emergency brake. Place your floor jack under the front axle and raise vehicle. Place jack stands under the frame rails behind the front wheel wells and lower the frame onto the stands. Remove the jack and place blocks both in front of and behind the rear wheels. Remove the wheels.
3. Remove any skid plates or debris shields from the bottom of the vehicle.
4. Unbolt both brake line brackets from the frame and front axle brackets to allow for free movement of the suspension components.
5. Unbolt the sway bar from the end links and remove it from the vehicle. Save the

- sway bar and hardware for reinstallation.
6. Unbolt and remove the front track bar from the vehicle. Save the **OE** bolts and hardware for reuse
7. Raise a jack under the coil springs to

Work on one side of the vehicle at a time.

- support the axle.
8. Compress coil spring with coil spring compressor tool.
9. Locate the top shock mount in the engine compartment. Remove the nut, retainer and grommet from the shock. See **ILLUSTRATION 2**.
10. Unbolt the shock absorber from the lower mount bracket on the axle. Remove the shock through the engine compartment.
11. Carefully lower the floor jack until coil spring is free from the upper spring pocket. Remove the coil spring.
12. Remove and set aside the upper rubber isolator pad for the coil.
13. Repeat on other side of the vehicle.
14. Locate the front rubber bump stops, mounted on the frame near the coils. Remove the bump stop from it's pocket using a pair of pliers. A back and forth action will assist in working it out.
15. Place the new bump stops, PN **15-10995**, in existing bump stop pockets, as shown in **ILLUSTRATION 3**. By using leverage against the bottom of the bump stops, force the bump stop into place (detergent soap may help if the fit is tight).
NOTE: Use the weight of the vehicle to help set the bump stops in place.
16. On the bottom of the lower control arm. Mark the location of the index mark on

Complete control arm replacement on one side of the vehicle before removing the control arm from the other side.

the adjustment cam-bolt and bracket, remove the cam-bolt, washer and nut.

17. Next, remove the hardware from the frame bracket holding the lower control arm in place. Remove the control arm at this time.
18. Install the bushings PN **15-10979** and sleeves **90-2101** into the frame end of the new lower control arm PN **91-2359** as shown in **ILLUSTRATION 4**. Install the bushings PN **15-10978** and sleeves PN **90-8083** into the axle end of the new lower control arm as shown in **ILLUSTRATION 4**. Use the lubricant as necessary.
19. Install the new lower control arm with the **OE** hardware. Inspect and reinstall the factory cam-bolt and nut. Do not torque fasteners at this time.

20. Remove the factory upper control arm existing hardware from the axle bracket and frame bracket.

21. Remove the factory upper control arm.

22. Install the bushings and sleeves from hardware pack **PN 90-6274** into the new upper control arms. Refer back to **ILLUSTRATION 4**. Install the supplied sleeve **90-2114**.

23. Install the new upper control arm **PN 91-8107** into the original mounting location with the short bend to the rear of the truck, the bend will face up. Refer to **ILLUSTRATION 5**

NOTE: Rotating the lower adjusting cam-bolt may help installation.

24. Use the existing hardware to fasten the upper control arm as shown in **ILLUSTRATION 5**. Do not torque at this time.

NOTE: On V8 and diesel models the exhaust may need to be removed on the driver and passenger side. If

so, remove exhaust hanger bushings. Undo clamp on the turbo or unbolt from the header. Move exhaust out of the way to get the control arm bolt in and out. Remember to reinstall the exhaust to factory specifications.

NOTE: Some installers choose to cut the head off the passenger side upper control arm bolt rather than remove the exhaust. If you choose this method use the replacement bolt from pack (90-6654).

25. Repeat these procedures on the other side of the vehicle.

26. Tighten but do not torque the control arms at this time.

27. Remove the sector shaft Pitman arm retaining nut and save for reinstallation. Use a Pitman arm puller to remove the **OE** pitman arm. The threads of the sector shaft and the Pitman arm retaining nut must be cleaned of all factory dry adhesive.

ILLUSTRATION 5
PASSENGER SIDE

IMPORTANT!: THE ENTIRE INSTALLATION PROCESS MUST BE DONE WITH HAND TOOLS TO ENSURE PROPER INSTALLATION. DO NOT USE IMPACT TOOLS.

28. Install new pitman arm on sector shaft. Oil the sector shaft threads to ensure a proper torque reading. Install Pitman arm retaining nut and tighten until snug.
29. Insert the key and unlock the steering wheel.
30. Install the Pitman arm torque tool (**96-5779**) to the Pitman arm using one of the previously removed **OE** track bar bolt and

nut plate. See **ILLUSTRATION 6**.

31. Secure the torque tool (**96-5779**) to the existing hole in the track bar frame mounting pocket using one of the previously removed **OE** track bar bolt and nut plate. See **Illustration 6**.

NOTE: The steering wheel may need to be turned in order for the hole in the torque tool and the frame cross-member to line up. Once the bolts are tightened the torque tool will align it's self properly.

NOTE: The use of the torque tool is to keep the Pitman arm from moving

right or left, but allow for movement up the sector shaft. If you do not have this tool, a length of chain or a flat bar with two holes is a suitable replacement.

32. Torque the Pitman arm retaining nut to **225** ft.-lbs.
33. With the torque tool (**96-5779**) still in place remove the pitman arm retaining nut. The threads of the sector shaft and the Pitman arm retaining nut **MUST** be cleaned using brake cleaner or another suitable method to remove the previously applied oil.
34. Use the entire supplied thread locking compound to thoroughly cover the entire surface of the threads on the Pitman arm retaining nut.
35. Reinstall the Pitman arm retaining nut to the sector shaft and torque to **225** ft.-lbs.
NOTE: Whether re-using the existing pitman arm retaining nut or replacing with a new nut, thread locking compound must be used.
36. Unbolt and remove the Pitman arm torque tool (**96-5779**) from the vehicle.

NOTE: Save this Pitman arm torque tool to add to your toolbox for any future

Pitman arm installations.

37. With the front axle supported with a jack, disconnect and remove track bar. Lower the front axle.
38. Install the factory spring isolator onto the supplied Pro Comp coil springs (**56160 diesel or 56170 gas**). Carefully compress and install the Pro Comp coil springs (**56160 diesel or 56170 gas**) into the spring buckets. Raise the front axle into place and make sure the coil spring is indexed properly on the lower spring perch. See **ILLUSTRATION 7**.
39. Install your new Pro Comp shocks (PN **92952 or ZX2009**) through the coil spring from the engine compartment. Install using the previously removed upper hardware and the lower shock bolt. Torque the lower bolt to **60** ft.-lbs. See **ILLUSTRATION 7**.
40. Rotate the tie rod at the pitman arm **1/2** turn and attach it to the bottom of the new pitman arm. Torque nut to **45** ft.-lbs.
41. Install the sway bar drop brackets (**90-4315**) to the original sway bar mounting studs in the frame using the previously removed **OE** hardware. Torque to 45 ft./lbs. See **ILLUSTRATION 8**.
IMPORTANT: Be sure that the drop

brackets are offset toward the front of the vehicle.

42. Raise the sway bar mount brackets to the studs on the drop bracket (90-4315) and secure using the supplied 7/16" hardware from pack (90-6676). Torque the hardware according to the torque chart on page 15. **See ILLUSTRATION 8.**
43. Assemble and install to the axle the sway bar link (90-2357) with the bushings and P-843 hardware from pack (90-6312). **See ILLUSTRATION 9.**

NOTE: Some models may have a 14mm lower sway bar hole. If so, use the 14mm bolts and hardware from pack (90-6430), lower bushings and sleeves from pack (90-6242) on the bottom to attach

the links to the axle.

44. Use the 3/8" X 1 1/2" bolt, spacer (90-8113) and 3/8" washers and nuts from (90-6024) to attach the (90-1010) to the sway bar end. Use the 3/8" X 2 1/2" hardware from (90-6024) to attach the (90-2357) to the (90-1010). **See ILLUSTRATION 9.**
45. Repeat on the other side of the vehicle.
46. Install the hose clamps and screws from hardware pack PN 90-6029 to the brake lines.
47. Bolt the front brake line extension brackets PN 90-1539 to the original OE brake line bracket holes, on the front axle brackets, using the previously removed OE bolts.
48. Secure the OE brake lines to the brake line extension brackets PN 90-1539 using the supplied 5/16" X 1" bolt and hardware.
49. Remove the OE cab mount bolt directly behind the front wheel well. Save for re-installation.
50. Unbolt the lower rear portion of the plastic inner fender.

51. Install the inner fender relocation bracket to the vehicle using the previously removed **OE** cab mount bolt. Leave the bolt hand tight only at this time. **See ILLUSTRATION 10.**

52. Using the mounting bracket as a guide drill through the inner fender using a **1/4"** drill bit. **See ILLUSTRATION 10.**

53. Secure the inner fender to the relocation bracket using the **10-24 X 3/4"** and hardware. **See ILLUSTRATION 10.**

54. While pulling the inner fender as far back as it will go, tighten the **OE** cab mount bolt. Torque the bolt according to manufacturers specifications. **See ILLUSTRATION 10.**

55. Install your wheels and tires and lower the vehicle to the ground. Tighten the lug nuts to **90** ft-lbs.

56. Torque the control arms to specifications chart in the rear of the instructions.

57. Drill out the existing track bar mounting

hole in the frame to **5/8"**.

58. Secure the track bar drop bracket (**91-7658**) to the frame mounting pocket by inserting the **5/8" X 4 1/2"** bolt, from the backside, **5/8"** hardware and (**90-8231** long sleeve, in between the **OE** frame mounting pocket and the **90-8232** short sleeve, in front of the **OE** frame mounting pocket and the backside of the track bar drop bracket **91-7658**). **See ILLUSTRATION 11.**

NOTE: Be sure to use thread locker on this bolt. DO NOT the bolt torque at this time.

59. Insert the **7/16" X .788"** split sleeve (**61734**) into the crossmember hole closest to the driver side track bar mount. Insert the **3/4" X 1 1/2"** crossmember sleeve (**90-8233**) in the center hole in the crossmember. **See ILLUSTRATION 11.**

60. Rotate the track bar drop (**91-7658**) up into place and secure using **1/2" X 2 1/2"** bolt and track bar nut (**90-4460**) in the center hole and the **7/16" X 3"** bolt, **90-7882** washer and hardware in the remaining hole. **See ILLUSTRATION 11.** Torque the track bar drop mounting hardware according to the chart on page 15. Torque the **5/8" X 4 1/2"** bolt to **175** ft./

ILLUSTRATION 11

lbs.

NOTE: Be sure to use thread locker on these bolts.

61. Reinstall the **OE** track bar using the previously removed **OE** hardware at the axle end and the new adjustable cam bolt (**90-4412**) and cam hardware from hardware pack (**90-6852**) in the new frame mount end (**91-7658**). Be sure to install the cam with the head of the bolt facing the front of the vehicle. Do not torque the cam bolt at this time. **See ILLUSTRATION**

11.

62. With the vehicle on the ground, measure from the outside edge of the tires to the edge of the wheel well on the fenders. Use the cam to center the axle under the vehicle by rotating the cam until the measurement is equal on both sides. Torque the cam bolt to **150** ft./lbs.

63. See the driveshaft note on page 15. **See ILLUSTRATION 12.**

64. With the vehicle on the ground, re-attach sway bar end links. Torque down end links and sway-bar bolts. on all newly installed hardware.
65. On both sides of the vehicle, check the routing of the brake lines and the ABS wire harnesses. There must be no pinching, rubbing, or stretching of any component. Use zip ties to secure these items out of the way of the steering components. At full droop, cycle the steering from lock to lock while observing the reaction of these components. Reposition them if needed.
66. Recheck for proper installation and torque, of all of the newly installed hardware and after any off road use.
67. Have your vehicle aligned.
68. Have your headlights adjusted.
69. After 100 miles recheck for proper torque

DRIVE SHAFT NOTE: WHILE THE TRUCK IS IN THE AIR SPIN THE FRONT DRIVE SHAFT. IF THE FRONT DRIVE SHAFT BINDS AT FULL DROOP THE JOINT CAN BE TRIMMED. YOU CAN GRIND THE OUT SIDES OF THE CLOSE JOINTS ON BOTH SIDES. YOU WILL ALSO NEED TO GRIND THE INSIDE OF THE FAR JOINTS ON BOTH SIDES. USE THE ILLUSTRATION TO GUIDE YOU. YOU SHOULD HAVE THE DRIVESHAFT BALANCED BY A QUALIFIED SHOP WHEN YOU ARE FINISHED.

Rear Installation

1. Block the front tires and raise the rear of the vehicle. Support the frame with jack stands forward of the rear springs.
2. Remove the wheels and tires.
3. Remove the shocks on both sides of the vehicle. It may be necessary that you slightly raise the axle to unload the shocks for removal.
4. Remove the factory bump stop from the frame.
5. Fit 2 of the new BUMP STOP BRACKETS **91-3081** together as shown in **ILLUSTRATION A**. Then bolt to the frame using the factory bolts.

6. Using the hardware from pack **90-6223** bolt the bump stop to the brackets. As shown in **ILLUSTRATION A**.

7. Repeat the installation on the other side of the vehicle.

8. Loosen the U-bolts on the passenger side. Remove the U-bolts on the drive side.

9. Install the lift block (**95-300D**) on the axle pad and use your floor jack to raise the axle to the spring. Apply a slight amount of pressure with your floor jack against the spring pack and engage the centering pins into the locating holes at the top of the lift block.

NOTE: The factory spring pack will have two metal pins on the

bottom, it may have a third plastic pin in the center. To install the lift block this plastic pin can be removed with a pair of pliers.

10. Secure the assembly with the U-bolts **13-90330** and new high-nuts and washers from hardware pack **20-65302**. Do not tighten the U-bolts at this time. See **ILLUSTRATION B**.

NOTE: make sure the block sits flush on the axle perch.

NOTE: If the vehicle is equipped with a Dana 80 rear end, use U-bolts 13-90328 and hi-nuts 20-65471. The holes in the spring plate will need to be drilled out to accommodate the new larger U-bolts.

11. Repeat the installation on the other side of the vehicle.
12. When the installation of the remaining side is complete, torque the U-bolts to 85 ft. lbs.
13. Install your new Pro Comp shocks (**929543 w/shaft up, ZX2001**) and torque this hardware to **60 ft./lbs.**
14. Reinstall the wheels and tires and lower the vehicle to the ground.
15. Recheck the wheel lug torque on all four

wheels at this time.

16. Recheck all hardware for proper installation and torque at this time.

17. After test driving: If there is a rear drive line vibration you can install shim kit **51255** with hardware pack **90-6327**. Try various combinations until the vibration is eliminated.

Bolt Torque and ID

Decimal System

Metric System

All Torques in Ft. Lbs.

Bolt Size	Grade 5	Grade 8	Bolt Size	Class 9.8	Class 10.9	Class 12.9

G = Grade (Bolt Strength)
D = Nominal Diameter (Inches)
T = Thread Count (Threads per Inch)
L = Length (Inches)
X = Description (Hex Head Cap Screw)

P = Property Class (Bolt Strength)
D = Nominal Diameter (Millimeters)
T = Thread Pitch (Thread Width, mm)
L = Length (Millimeters)
X = Description (Hex Head Cap Screw)

MODIFICATIONS PAGE:

8.18.10: Changed sway bar drop (**90-4205**) to (**90-4315**) and added sway bar drop ILLUSTRATION 10.

6.6.12: Removed (**96-7733**), (**90-6268**), (**91-7728**) from the BOM box-1. Removed the contents of the old BOM box-2 along with corresponding ILLUSTRATION #11 and text. Replaced BOM box-2 with the contents of kit (**91-7658B**). Inserted the corresponding text and ILLUSTRATION #11 from kit (**91-7658B**).

12.18.12: Removed the FOX shock info from the BOM and text and added Box-3BP information to BOM and text.

1.10.13: Added the side view illustration to illustration 11.

2.13.13: Updated illustration 9, logo and rear warranty page.

2.2.15: Changed Pitman arm PN from DC600-1 to DC601-1.

2.19.15: Changed Pitman arm retaining nut torque value to 225 ft./lbs.

8.19.21: Added T & M instances to K2080 & K2081.

The PRO COMP PROMISE WARRANTY

At Pro Comp, we know you have many choices when selecting products to personalize your vehicle. You should demand nothing but the highest quality available and have total confidence that the products you selected are the best in the industry. It is for these reasons that Pro Comp Suspension products are backed by the best warranty in the industry...the Pro Comp Promise!

Pro Comp promises that its products will last a lifetime or we will replace it free of charge. It's that simple! Because of our commitment to quality and manufacturing excellence, we are able to stand behind our products. FOREVER.

It is Pro Comp's Promise that if one of our suspension products breaks not due to misuse, neglect or vandalism, we will replace it. Whether you are the original purchaser or not, you can be assured that we will make it right. The Pro Comp Promise covers all suspension products including shocks and steering stabilizers. Buy Pro Comp Suspension today and enjoy it for the rest of your life!

That's our Pro Comp Promise!

Notice to Owner, Operator, Dealer and Installer:

Vehicles that have been enhanced for off-road performance often have unique handling characteristics due to the higher center of gravity and larger tires. This vehicle may handle, react and stop differently than many passenger cars or unmodified vehicles, both on and off-road. You must drive your vehicle safely! Extreme care should always be taken to prevent vehicle rollover or loss of control, which can result in serious injury or even death. Always avoid sudden sharp turns or abrupt maneuvers and allow more time and distance for braking! Pro Comp reminds you to fasten your seat belts at all times and reduce speed! We will gladly answer any questions concerning the design, function, maintenance and correct use of our products.

Please make sure that the Dealer / Installer explains and delivers all warning notices, warranty forms and instruction sheets included with Pro Comp product.

Warranty and Return Policy:

Pro Comp warrants its full line of products to be free from defects in workmanship and materials for the life of the product. Pro Comp's obligation under this warranty is limited to repair or replacement, at Pro Comp's option, of the defective product. Any and all costs of removal, installation, freight or incidental or consequential damages are expressly excluded from this warranty. Pro Comp is not responsible for damages and / or warranty of other vehicle parts related or non-related to the installation of Pro Comp product. A consumer who makes the decision to modify his vehicle with aftermarket components of any kind will assume all risk and responsibility for potential damages incurred as a result of their chosen modifications. Warranty coverage does not include consumer opinions regarding ride comfort, fitment and design. Warranty claims can be made directly with Pro Comp or at any factory authorized Pro Comp dealer.

IMPORTANT! To validate the warranty on this purchase please be sure to mail in the warranty card.

Claims not covered under warranty

* Parts subject to normal wear; this includes bushings, bump stops, ball joints, tie rod ends and heim joints.

* Finish after 90 days.

* Damage caused as a result of not following recommendations or requirements called out in the installation manuals.

Pro Comp MX Series coil-over shocks are considered a serviceable shock with a one-year warranty against leakage only. Rebuild service and replacement parts will be available and sold separately by Pro Comp. Contact Pro Comp for specific service charges. Pro Comp accepts no responsibility for any altered product, improper installation, lack of or improper maintenance or improper use of our products.
