## Why Easiklip?

**IT'S FAST**  
Install 2-3 times faster than typical hardwood and walk on it the same day! No need for finicky nails and smelly glue.

**IT FLOATS**  
Our simple clip system solves the problem of expansion and contraction, allowing you to install it **in previously near-impossible places like basements and over concrete.**

**IT'S EASY TO REPAIR**  
Just unclip and replace damaged boards. It's as easy as building with lego. Faster repairs mean less expense and less waste.

**IT'S REMOVABLE**  
The first hardwood floor that can come apart after it's been installed. Take it with you when you move, or protect it during major renovations.

**IT'S GREEN**  
It's so easy to install, repair, remove and maintain, that it may just be the longest lasting and most sustainable part of your home (aside from the foundation). And did we mention no harmful VOCs?

**1** Specially milled tongue and groove hardwood planks

**2** Aluminum clip

**3** Silicone rubber beads set an automatic expansion gap

**4** Lip connects to special groove under floor boards
