

WonderPana

FILTER SYSTEM

FOR WIDE AND ULTRA WIDE ANGLE LENSES

HERE WE GROW AGAIN!

The WonderPana Filter System has set the industry standard for real-time filtering of wide and ultra wide-angle lenses. Now we support more lenses than ever with our large 186mm WonderPana XL Filters! We have precision custom mounts for more than 25 different lenses, with dozens of round and rectangular filter options suitable for both still and video work.

Shoot long exposures with our ND1000 filter, manage reflections with our 145mm or 186mm circular polarizer, capture cinematic shallow depth of field effects in bright conditions, and so much more. Shape your vision and unlock your true imaging artistry with the WonderPana Filter System.

Check out the back of this flyer for supported lens models and available filter options!
