

FlapJack

LED EDGELIGHT

A NEW LIGHTING EXPERIENCE

Don't let their good looks fool you. That's just one way that the FlapJack LED Edgelights from FotodioX are changing what you expect from an LED light. Instead of the harsh beam from a typical LED panel, FlapJacks glow with a flattering internally bounced light. No hot spots, no multiple shadows or reflections, and they are available in both daylight and bi-color color temperatures. It's like lighting with a premium softbox, but with zero setup time from a lightweight and compact lighting instrument about 1cm thin.

The flagship FlapJack Studio boasts an 18" diffusion disc that's perfect for both studio and location shooting. Ultra-portable, ultra-versatile, these lights are ready for action right out of the custom fitted case. FlapJacks' compact size makes transport and setup easier than ever, with a sleek look that looks great on camera. With more than 10 different types of bi-color and daylight FlapJacks, including new Ring and Wand styles, you'll find the perfect FlapJack for the perfect shot every time.

Every FlapJack kit comes complete with NP-F style batteries (our Studio model also includes a V-lock battery plate), charger, AC adapter and mounting hardware - all in a fitted case.
