

ND THROTTLE

Our ND Throttle Adapters provide creative control for any attached lens without the need to pack multiple sizes of variable ND filters. The rear-mounted Variable ND will provide creative control over any attached lens with a 1-8 stop (ND2-ND256) range; even wide-angle lenses that are notoriously difficult to use with traditional front mounted filters. We offer a wide variety of mount options for both mirrorless and DSLR cameras ensuring that the right combo of vintage and modern equipment will suit the creative needs of any project.
