

## **Installation Instructions for Wikk's ADA Double-Pole (2P) switches to the Door Operator:**

### For Hardwiring -

To energize the ADA switch, connect the N.O. (Normally Open) and the Common (COM) terminal to the matching terminals on the Door Operator. (See diagram below)  
To energize additional device, connect the N.O. (Normally Open) and the Common (COM) terminal to the matching terminals on the Door Operator. (See diagram below)

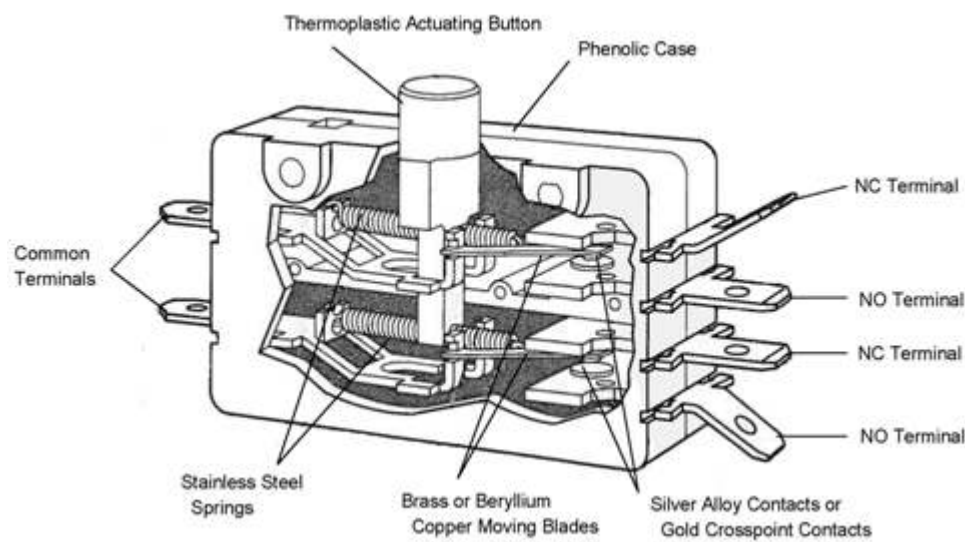

### For Wireless-

Connect either of the wires from the transmitter to N.O. (Normally Open) and the Common (COM) terminal and hook up the Receiver to the Door Operator. (Refer to Door Operator instructions and Receiver instructions for wiring)

Wiring is done the same as a normal light switch, except that an ADA Switch is momentary, not maintained.

### Features-

- Double Pole-Double throw, dry contact momentary action micro-switch, Capable of normally open or closed
- Compatible connection with low energy automatic door operators.
- Maximum temperature rating: -40 Degree F. to +221 Degree F (-40 Degree C to +105 Degree C)
- Silver-cadmium oxide contacts
