

CASE STUDIES

Fraser Landmark, Surrey BC: Stormwater Detention System

This site came with several challenges; the first was that the tank location needed to be installed in a tight space with height restrictions. Secondly, the tank location was built in an existing, irregular-shaped planter courtyard. This made the tank more difficult to fit into this unusual space, but we were able to find a tank configuration that fit well and maximized the available space.

Project Team

Supplier: BARR Plastics
Developer: Darshan Builders
Engineer: Citiwest

Specifications

Volume (m³): 115
Application: Detention

BARR Product

Graf EcoBloc Inspect Flex
Graf EcoBloc Maxx
