Remote Control (optional)

The mirror can be controlled by remote control.

Menu Setting

Quick press - you can switch between "SET", "VIEW", or enter set. When you press "VIEW", press the "SET" among the three. "SET" and "VIEW" can be changed in the figure of each setting.

ADJUSTABLE GUIDE LINE (optional)

About Guide Line

Generally, to help drivers adjust the distance from obstacles, there are three lines for reference, red, yellow, and green. These lines are detected on the mirror when moving. The green line is for the front of the area and the red line is for the rear of the area. The yellow line is for the blind area. If the line remains on the left and right side should move it from the car.

How to Adjust the Guide Line

According to the size and standard reference, you can put references such as a rod or the size of the car. Comparing with the mirrors reference, we can adjust the size and angle of the two guide lines displayed in the display. The display can adjust the accurate and stability guide line since it can be corrected.

1. Stop the vehicle.
2. Select "Read all the guide lines".
3. Under the guidance of the reference, you can adjust the guide line in the display.
4. The car should be placed in a parking lot. The front and back side are adjusted by the corresponding location of guide lines. (The color reference and extra rotating). After adjusting the angle of guide lines, it goes to operate and rotation. Calibration checked, moves the mirror toward to the corresponding guide line.

Quick tips are to be used only as a reference guide. Some mirror guidelines are different. The green guide is always green. And the red guide is always red. But it is not visible on the video monitor.
