

Spring Has Finally Arrived!

Latest News : October 2022

Spring ??? Well, it appears that Spring has finally arrived. Southland has had the best Spring for the last 4 – 5 years, with farmers actually enjoying calving, fewer down cows with increased production and grass surpluses. Not so for many of the other regions, where Spring has definitely sprung late. Balance day is definitely later than normal in these regions. To top that off, NIWA predictions are for a dry summer, similar to last years! So pull out the duty manuals on dry farming.

For those of you who still need to drench your herd we have a great special of Eprizero Pour On worm drench. See details on our Animal Health Products, page 7. Beware, stocks are running low.

Golly gosh or other stronger words for the grading issues some farmers are having. It's great to have customers returning to Agmax now that they understand the mechanics of their milk plants and vat.

However, excuse my frustration, but after 23 years I am still amazed at the lack of understanding from farmers about what causes a milk grade.

Just remember the old adage:

"Bacteria cause grades not chemicals".

That means if you get a grade, you have milk soil somewhere in your plant and vat. This is caused by poor mechanical action and people not doing their job properly. That is, not washing the plant and vats correctly. Check-out the milk quality section on page 3 to remain grade-free. Enough said!

The Office team at Agmax got decimated with Covid after dodging the Covid bullet for over two years. I trust the majority of you have avoided Covid after being out in the fresh air on farm. It is great to see most of the Covid restrictions are no more!

Good on Groundswell organizing another protest on Thursday 20th October. When will these numbnuts in Government realise that farming, in particular, dairying is the mainstay of New Zealand's economy?

Virtue signalling is the calling card of these misfits. Bring on the next election when these parasites will be kicked for touch.

In the meantime, here's to a great end of Spring!

****NEWSFLASH****

1. Wait for it. Surprise, surprise - Our Iodine raw material has arrived 6 weeks earlier than expected, so we now won't run out. However the price of the Iodine raw material has gone through the roof. In fact, a 59% increase. My suggestion for those customers who use Iodine is to change to Teatsweet or Chlorhexidine. Check out our prices in this newsletter (*see page 6*) effective from 24 October. Check website for product details and/or call our team for more information.
2. Another price rise. After 11 years, Chlorine has increased in price by 10% and we will be passing that on from 24 November this year.
3. Splash-N-Dash, the equivalent product to Wet & Forget™ will however be reduced immediately:
20 litres - was \$293 now **\$269** incl GST (*see page 5*)
5 litres - was \$108 now **\$79** incl GST
4. Wait for it. YES- Glyphosate 360gm is now back in stock, so order away!

Love life and stay well!

Beware of Bloat!!!

Which bloat product should you use?

Regardless of the weather and which party is in parliament – cows can still get bloat. We're often asked which is the right bloat product to suit your use. Both of our bloat products are suitable for drenching, trough treatment and pasture spraying. They are specially formulated for application through in-line dispensing systems and are safe to use through alkathene piping. There is very little difference between both products barring their chemical composition, as they both work very effectively. However, my recommendation is Bloat Buster. Why? Because you save some money and Bloat Buster is a more free-flowing product out of the drum than Bloat Stop.

Getting the dose right when drenching

When drenching, here's how to make sure you've got the calculations right. Say you want to give a 4ml dose of bloat concentrate, and your drench gun delivers a 90ml total dose.

4ml is 4.5% of 90ml (4 by 90, $\times 100$). So, no matter how much you mix up at a

time, it should contain 4.5% of bloat concentrate. For example, if you are mixing up 60 Litres, the correct amount of bloat concentrates to include is $60 \times 4.5\% = 2.7$ Litres.

Note that you've got to use three variables for this calculation:

1. The dose rate that you want to give (mls).
2. The total volume your drench gun delivers (mls).
3. The amount you want to mix up at once (Lt).

Tip: CHECK that your gun is really delivering the total volume you think it is!

BLOAT BUSTER

This is a premium-grade alcohol ethoxylate product. Bloatbuster is cold water soluble and suitable for both drenching and trough treatment. It is in-line dispenser and alkathene pipe friendly. It has a 4ml dose rate, with 7ml for severe conditions. Bloatbuster is particularly strong on duration of protection after drenching, with most people using it once a day for at least some of the time (the exact duration of protection varies with the conditions, and from herd to herd, but the product is noted for its long period of effectiveness).

BLOAT STOP

This is a premium-grade blend of pluronics which gives outstanding bloat protection for the stock. It is also in-line dispenser and alkathene pipe friendly – it can be drenched and added to the trough and is cold water soluble. Use rate is 4ml in normal conditions and increase to 8ml for severe conditions. It mixes in cold water and easy to apply through an inline dispenser.

Milk Quality

Stay Grade Free with the **AGMAX GRADE BUSTERS**

ALKALI SACHETS

The preferred chemical to eradicate, eliminate, get rid of, destroy, annihilate and blitz milk soil is Agmax Alkali. Milk soil has two major components. Milk fat and protein. Alkali is made up of chlorine which gets rid of protein and caustic soda which gets rid of fat. However, people like to skimp on alkali because it involves too much hard work. That is, you have to do an Acid detergent rinse afterwards and it uses hot water.

Remember bacteria cause grades, chemicals don't. The only way bacteria can be in your plant is if there is milk soil in your plant. That is, it hasn't been cleaned properly. That is not the chemical fault. It is the fault of poor cleaning action in the plant and people not doing their job properly.

USES

- For plant and vat washes.
- This alkali comes in a fantastically sealed pre-measured sachet. The chlorine and caustic soda stay intact, it doesn't go off and degrade as it does in loose alkali powder in buckets.
- No measuring, no spills, no waste.
- Sachets retain full alkali strength for years.

VAT CLEANER

This product is exclusive to Agmax. The most amazing invention since sliced bread. It is MPI approved for use in farm dairies. We have taken the alkali powder and through magic and pure genius have created this caustic chlorinated alkali gel. The only one of its kind on the market. This product cleans more effectively as it sticks to surfaces and therefore has greater contact time. That is, any milk fat and protein will have been eradicated. Remember no fat, no protein therefore no bacteria can live there because there is no food source, therefore no grades.

TIPS FOR AGMAX VAT CLEANER

- **TIP 1 - Vats:** Pour up to 500 mls of vat cleaner into the vat alkali wash. Vat washes are not affected by the amount of foam. This prevents you having to get into the vat to do a manual clean as the foam clings to the vat, creating heaps of contact time and does the cleaning for you. Health & Safety will love you for it and you will love Agmax because you don't have to get in your vat.
- **TIP 2 - Machine:** Anyone who has a plant that has poor/weak mechanical action. That is no slug, comet or boss wash, lack of contact time, simply add 100ml of vat cleaner to your alkali wash and watch the resulting foam make contact with your line and the receiving can (Too much foam will flood the sanitary trap).

CHLORINE

Not all chlorines are equal. Check the labels of other chlorines and you will find they are weaker in strength. Our chlorine is 270g/lit of Sodium Hypochlorite. If you find it is less than this – it has just been diluted with water. Chlorine is the protein buster. That is, chlorine eliminates and gets rid of protein in your plant and vat. Thermodurics love living in protein. Get rid of the protein, get rid of the thermodurics; therefore no grade.

USES

- **Milk Plant and Vat Washing:** Add 250mls of Agmax Chlorine to every 100 litres of alkali wash solution for both plant and vat once a month or when necessary to prevent protein build up.
- **Water Exclusion:** If on water exclusion use 5mls Agmax Chlorine per 100lt water in the final rinse of both the plant and vat.
- **Concrete Cleaning:** Use 1-part Agmax Chlorine to 2 or 3 parts of water. Apply using a trigger sprayer or pressure sprayer and spray onto the affected area to wet.

Dairy Shed Essentials

CONCENTRATED ALKALI SACHETS POWDER

- 20kg equal to 30kg of other brands
- Dilution rate 100gm/100lt
- No measuring, spills or waste
- Sachets retain full chlorine strength
- **NPE & QAC FREE!**

MPI approved for use in Farm Dairies

Herd Over The Fenceline

The Last Laugh...

There were two farmers: a positive farmer and a negative farmer. Whenever it would rain the positive farmer would say; *"Thank goodness for the rain – now we don't even have to water the crops."* The negative farmer would say, *"If this keeps up it will rot their roots and we won't have any crops to harvest"*.

The sun would come out and the positive farmer would say, *"Thank goodness for the sunshine. Now our crops are getting the vitamins and minerals they really need."*

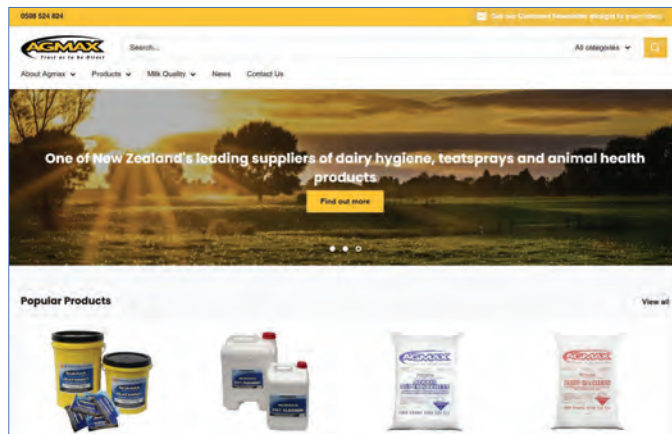

The negative farmer would say, *"If this keeps up it will scorch them and we won't be able to make a living."*

One day they went hunting together and the positive farmer brought along his new bird dog. Once they were out in the middle of a lake in a boat, the positive farmer took aim and shot a bird.

He then turned to the negative farmer and said, *"Watch this."* The bird dog jumped out of the boat and miraculously ran on top of the water, picked up the bird, turned around and ran back to the boat on top of the water, before setting the bird perfectly in the boat in front of the positive farmer. The positive farmer looked at the negative farmer and asked, *"What do you think?"* The negative farmer shook his head and said, *"Just as I thought, that dog can't even swim."*

Have you checked out our new website yet? www.agmax.co.nz

Our new website was launched on 6th July this year. If you haven't already, take a good look around over a cuppa.

We manufacture and distribute DIRECT to farm products from farm hygiene, teatcare, bloat, animal health, to herbicides and homecare. We've got all your needs covered! Need information on milk quality or technical support? We're here to help. Our latest news section includes links to our newsletters, as well as other interesting articles and editorial articles in publications. Coming in the future, you will be able to purchase products from us directly off our website - *watch this space!*

Credit Card Payments

Visa / MasterCard only

Agmax now has the facility to accept Credit Card payments.
