

Sample Installation: Vented Through Ceiling

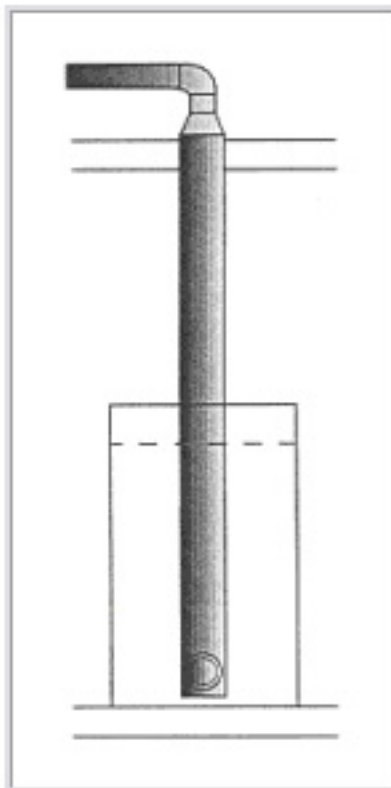

Figure F: In this installation, two 4' periscope extensions are inserted between the two halves of the Almetal™ Dryer Vent in order to extend it all of the way through the ceiling to attach to existing round exhaust pipe. This is a good installation for dryers located in basements with unfinished ceilings. To adapt this installation to a similar layout with a finished ceiling, the periscope end of the Almetal™ Dryer Vent could be connected to round duct pipe before it goes through the ceiling. This would eliminate the need for cutting a rectangular hole in the ceiling.

PARTS:

Almetal™ Dryer Vent - END

Two (2) 4' Periscope Extensions

Damper (if needed)
