

If you haven't tried DMK's at-home Enzyme Masque, then put it on your To Do list today!

HOW TO: Apply the Enzyme Masque

The DMK Enzyme Masque at-home is the perfect take home masque to maintain your skin in-between visits to your DMK clinic.

Designed to remove frequently found dead cell build-up on the skin, this unique masque is best applied weekly and combines a powder (Foamy Lift) and a gel (Exoderma Peel), which when mixed, tightens and firms on the skin - assisting to improve blood circulation, leaving you with a fresh, radiant post-treatment glow.

A

Combine 2 tablespoons of *Foamy Lift* powder with 1 tablespoon of *Exoderma Peel* gel into your DMK mixing bowl. Add a little gel at a time.

B

Using the thin end of your DMK fan brush, gently mix the powder and gel together to form a thick creamy paste.

C

Following steps 1-9 in the above diagram apply to the entire face using upward strokes. Brush over the eyebrows and just underneath the eyes.

D

Leave the masque to set for approximately 30-45 minutes. Your skin will feel very tight by this point - this is a good thing!

E

After 30-45 minutes soften the masque with a wet hand towel and remove remaining masque with warm water and DMK cleanser.

F

Your skin will appear refreshed, pinkish in colour (due to increased levels of circulation) and is ready for your DMK nourishing products.
