Additional door at end of house	230
Wall Vent in shadecloth	89
Door flap in shadecloth	113

Combination House

Provides the best of both worlds, a shadehouse and a hot house in one.

Perfect for growing vegetables, herbs, hydroponic plants, flowering plants, propagating seeds & cuttings, indoor plants and more Warm temperatures build up in the hot house section allowing plants to keep growing even in the winter months. The shade house section allows for hardening off plants, shading plants, resting indoor plants, ideal for shade loving orchids, flowers and herbs. The Combination House comprises 2 separate rooms with a wall & door dividing both sections. The shade house section is at the front section and the hot house section at the back. The dividing wall covering material is in 'solashield' hot house material.

Style options:

The hot house section can be either the Split Roof (opening roof) or Standard house option (no opening roof). The area is covered using 'solashield' material. The Split roof option allows for superior airflow - which is imperative for healthy plant growth. The unique design allows the entire length of the roof to open and via air convection, cooler air enters through the lower vents and pushes hot air out the roof vent. The bird screen provided prevents birds, pests etc entering the roof opening. The opening roof section hinges on the left side and opens to the right side of the house.

The shade house section is covered using shadecloth. The shadecloth material may be green, white or beige.

FEATURES include:

- * Strong, galvanised 'Orrcon' steel frame in kit form
- *Sewn reinforced fitted cover
- *Full size steel hinged door
- *Lockable steel door handle
- *Frameshield tape (hot housesonly)
- *Two wall vents (for hot house only,
- 1 door vent, 1 wall vent)
- *Bird Screen (Split roof house only)
- *Pegs for ground fixing
- *Screws, rubber and steel washers

*Set of DIY instruction **Adloheat**
