

Instructions

Half Covers – for Standard hot house & Shade house

Each side edge of the thro-over cover is fitted with bungee loops to attach to the house frame (pictured).

1. Position the cover over the house so that it fits centrally and is even on both sides of the house.
2. The buttons should be fitted with self driller screws provided
3. Fix the buttons on the side & front (fitted ends cover only) of the house so that the loops are tight and the cover is firm.
4. To remove simply unhook the loop and store the cover away.

Note: Half cover: covers the top and midway down both sides of the house
Half cover with fitted ends: covers the top, midway down both sides, & midway across the front & back of the house.
