

Horticultural fabrics

Shadecloth

50% green, white, black	1.83 wide	\$ 8.00 p/m
70% green, white, black	1.83 wide	\$ 8.00 per mtr
70% beige	3.66 wide	\$16.00 per mtr

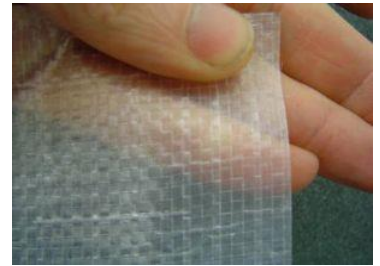

Solarshield Plastic horticultural film

Solarshield

Woven high density polyethylene scrim, with double lamination using low density polyethylene. UV stabilised. Dirt repellent, excellent toughness and strength. Resistance to most chemicals, Light transmission 85.6%. Commercial grade quality and designed specifically for horticultural use.

1.83m wide	\$ 10.00 per mtr
2.70m wide	\$ 14.00 per mtr
1.83mwide	\$380.00 per roll (50m)
2.70m wide	\$588.00 per roll (50m)

Igloo Polythene 210UM

7.5 wide \$19.50 per mtr

(anti-drip/ 4 seasons)

210um Polythene is high in light transmission (over 91%) for superior crop production, it is also anti- condensation treated on one side which is faced toward the crop. The anti condensation feature helps prevent condensation droplets from forming on the inside surface and dropping onto the plant crop.

Frame Shield Tape

Prolong the life of plastic covers by creating a barrier between the steel frame and the cover.

Frame Shield tape is a self adhesive white 100% polyester felt tape designed to provide a soft barrier between the frame and the plastic cover. By reducing abrasion and excessive temperatures at the film/frame contact points, both extended life and reduced maintenance of the covering can be expected. A high contact acrylic adhesive is used on the tape and this adheres well to steel. Do not apply in wet conditions, make sure surface is free of dirt, grease oil etc.

Size: 25mm x 30m length

\$35 per roll
