Annals of Human Genetics vol 35 Reprinted from the Annals of Human Genetics, vol. 35, 1972. ?James Van Gundia Neel (March 22, 1915 ? February 1, 2000) was an American geneticist who played a key role in the development of human genetics as a field of research in the United States. He made important contributions to the emergence of genetic epidemiology and pursued an understanding of the influence of environment on genes...Of particular interest to Neel was an understanding of the human genome in an evolutionary light, a concept he addressed in his fieldwork with cultural anthropologist Napoleon Chagnon among the Yanomamo and Xavante in Brazil and Venezuela. His involvement in this fieldwork came under heavy scrutiny and criticism in the Darkness in El Dorado controversy, a scandal in

- anthropology that broke in 2000 involving numerous allegations of unethical research that threatened serious damage to Neel's reputation? (Wikipedia). First separate edition. Offprint. Original wrappers. \$100.00
