 Reprinted from Annals of Human Genetics vol 35 Reprinted from the Annals of
 Human Genetics, vol. 35, 1972. ?James Van Gundia Neel (March 22, 1915 ? February 1, 2000)
 was an American geneticist who played a key role in the development of human genetics as a
 field of research in the United States. He made important contributions to the emergence of
 genetic epidemiology and pursued an understanding of the influence of environment on
 genes...Of particular interest to Neel was an understanding of the human genome in an
 evolutionary light, a concept he addressed in his fieldwork with cultural anthropologist
 Napoleon Chagnon among the Yanomamo and Xavante in Brazil and Venezuela. His
 involvement in this fieldwork came under heavy scrutiny and criticism in the Darkness in El
 Dorado controversy, a scandal in anthropology that broke in 2000 involving numerous
 allegations of unethical research that threatened serious damage to Neel's reputation?
