

INSTRUCTION GUIDE

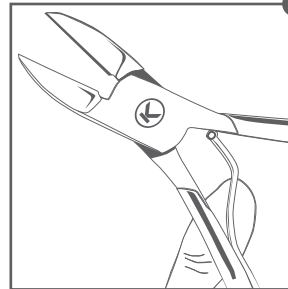

Kohm KP-700 for Thick Nails

Kohm

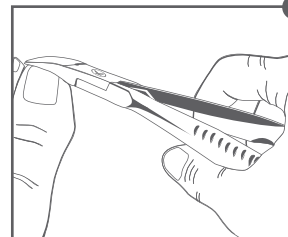

SETTING UP YOUR CLIPPER FOR NAIL CLIPPING

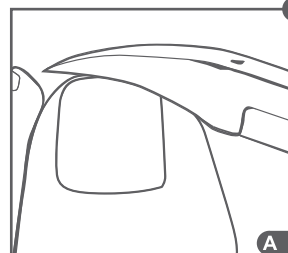

- 1 Remove the plastic tip cover from the nipper

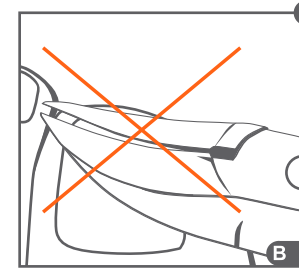

- 2 Lift up the spring so it will push against the lever on the opposite side. This spring will help to open up the clipper and your hand

- 3 Squeezing both handles to clip the nails. Spring should be engaged in this position while cutting nails.

- 4 Use the curved side of the clipper toward your nail. Do not position the curve away from your nail.

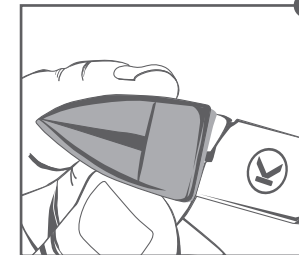

4

5

- 5 When you finish clipping your nails, wipe the cutting surface with a piece of cotton dampened with alcohol. This will disinfect the blade. Wait for the blades to dry.

6

- 6 Put the tip cover on while not in use to prevent sharp tip from cutting into your skin when picking up to use it.

PRIOR TO USE

The most important item you will need is your Kohm KP-700. Gather the following:

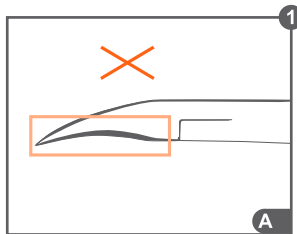

- Standard towel or paper towel to collect your discarded clips.
- Inexpensive latex gloves if you are clipping nails with fungus.

Some people with extremely thick nails like to soak their feet in warm water for around 10 minutes to soften the nails so they will not be as brittle. Brittle nails will split and you may damage the good nail bed.

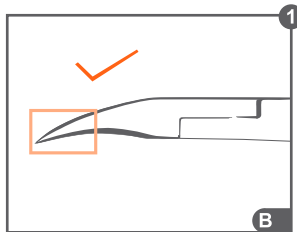

Make sure your feet and nails are completely dry before cutting.

CLIPPING INSTRUCTIONS

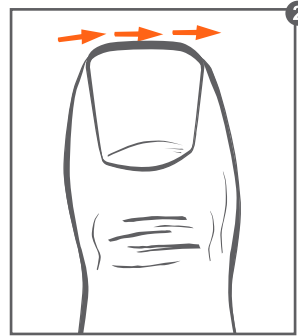

Use only the top 4-5 millimeters of the tip and clip small section of nail at a time. Do not use the entire surface of the blade to cut nail in one clip.

1 Begin on one side of the nail and clip little bits at a time. This keeps the nail from cracking or splitting.

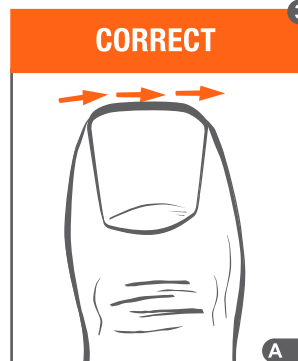

3

2 Clip your nail in a straight line and do not cut nails below the surface of the skin around the nail. Don't cut low at the edges. Let nails grow past the flesh of your toes. Podiatrists and professionals are

trained in the special handling of cutting down to the skin around the edges in a curved shape but you should not do it yourself. If you adhere to this advice you should be able to avoid ingrown toenails.

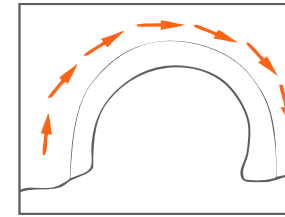

CORRECT

3 Do not believe more is better. This means that your mission should not be to cut your nails as short as possible. This can also result with ingrown toenails plus you are putting your toe in jeopardy of infection.

INCORRECT

4

For an omega-shaped nail, snip around and adjust the nipper along the way.
