

Advance Body Support Pack

by ChiroNutraceutical

DESIGNED SPECIFICALLY FOR OFFICES OFFERING BODY CONTOURING & RED LIGHT SERVICES!

The Advance Body Sculpting Support Pack is designed to support your body-sculpting patients and help ensure the best results possible. It includes three unique supplements, each with specific ingredients proven by research to help with different aspects associated with all body-sculpting clients.

BerberineMax

BerberineMax focuses specifically on blood sugar regulation, glucose/glycogen consumption, and lipid metabolism. Known as "Nature's Ozempic," the ingredients are the most powerful natural Glucophage (sugar eater) thought to exist. This helps improve glucose metabolism, stabilize blood sugar while minimizing the amount of unused glucose from being converted to and stored in the body as fat.

AGGR

AGGR focuses on accelerating fat burning and modulating key weight-related hormones, Leptin and Adiponectin, to help reduce fat cell size and suppress hunger and cravings at the hormone level.

CN-LIVER

CN-LIVER focuses on cleaning/detoxifying and strengthening the liver and gallbladder, allowing them to process the fat and cholesterol released from the fat cells during the red-light sessions more easily. This reduces the likelihood of liver and gallbladder issues.
