

# ChiroNutraceutical Radiculopathy & Neuropathy Supplement Protocol

## Synergistic Supplements: The Key to Neuropathy Management

Radiculopathy and neuropathy, characterized by nerve damage leading to symptoms such as pain, tingling, and numbness, demand sophisticated management strategies to alleviate discomfort and improve quality of life. These conditions can stem from various causes, including physical compression of nerve roots (in the case of radiculopathy) and systemic diseases affecting nerve health (common in different forms of neuropathy). Here's a refined look at how ChiroNutraceutical's Radiculopathy/Neuropathy Protocol supplements contribute to mitigating these symptoms and enhancing nerve regeneration:

**Organic Turmeric Curcumin with Black Pepper** is a high-dose and certified organic supplement that combines the anti-inflammatory and antioxidant benefits of curcumin with black pepper for better absorption. It helps reduce inflammation and supports nerve health, making it beneficial for managing neuropathy symptoms.

**Nitric Boost** This supplement uses nitric oxide's vasodilatory effect to boost circulation, increasing oxygen and nutrient delivery to nerves and aiding healing. It contains 8 unique non-GMO ingredients, including plant-based S7<sup>®</sup> and beet extract, enhancing blood flow, which is crucial for older adults with reduced nitric oxide production.

**Inerv8** combines high-dose alpha-lipoic acid and acetyl-L-carnitine, substances with proven efficacy in reducing neuropathic pain and promoting nerve regeneration. This dual-action formula targets the underlying causes of neuropathy, offering symptomatic relief and contributing to the restoration of nerve function.

**CN-B12 Plus** integrates bioactive forms of Vitamin B12 as Methylcobalamin, Vitamin B6 as both Pyridoxal 5-Phosphate and Pyridoxine HCL, and 5-MTHF, all of which are crucial for neurological repair, reduction of neuritic symptoms, and energy metabolism. This supplement addresses the multifaceted needs of individuals with neuropathy, from enhancing nerve repair processes to supporting overall energy and stress management.

**ActiFlex** provides near-immediate topical relief from the pain, tingling, and numbness associated with radiculitis and neuropathy, as well as arthritis and muscle/joint pain. It does this through its special formulation consisting of 11 unique active ingredients, which include Capsaicin, Menthol, Camphor, MSM, DMSO, ALA, HLA, Glucosamine, Arnica, Curcumin, and Vitamin E. Its transdermal delivery system ensures deep penetration, offering both immediate and sustained anti-inflammatory benefits.
