

Regen & Repair Pack

by ChiroNutraceutical

PERFECT FOR

OFFICES USING
SOFTWARE,
SHOCKWAVE, AND
OTHER NON-INVASIVE
PROCEDURES &
TECHNIQUES FOR
PATIENTS WITH
CHRONIC
CONDITIONS

The Regen & Repair Pack by ChiroNutraceutical is a supplement-based program designed to support non-invasive procedures and techniques that focus on the repair and regeneration of tissues regardless of the procedures or techniques used.

Each formulation includes specific research-backed ingredients that help enhance blood supply, oxygenation, nutrient delivery, inflammation reduction, and pain reduction.

Certified Organic Turmeric Curcumin

Organic Turmeric is rich in Curcumin, a compound known for its potent anti-inflammatory and antioxidant properties. Curcumin influences various molecular pathways involved in inflammation, cell survival, and proliferation. It modulates the activity of transcription factors, cytokines, and enzymes like cyclooxygenase-2 (COX-2), which play a crucial role in the inflammatory process. This makes it beneficial for repairing damaged tissue by reducing inflammation and oxidative stress, conditions often associated with chronic diseases and tissue damage.

Nitric Boost (Endogenous and Exogenous Nitric Oxide Precursors)

Nitric Boost contains ingredients that have been clinically proven to increase endogenous Nitric Oxide production by 230%! Nitric Boost is formulated to enhance the production of Nitric Oxide (NO), a vital signaling molecule in the cardiovascular system that regulates vasodilation, thereby improving blood flow and oxygenation to tissues. NO is synthesized from L-arginine, a semi-essential amino acid, through the action of nitric oxide synthase enzymes. Improved blood supply and oxygenation are critical for the efficient delivery of nutrients and removal of metabolic waste, facilitating the repair and regeneration of damaged tissues.

CNB12 Plus (Methylated Multi-B Complex)

CNB12 Plus combines Methylcobalamin (Vitamin B12), 5-MTHF (methylated Folic Acid) and 2 forms of Vitamin B6 (Pyridoxal5-Phosphate and Pyridoxine HCL) to support cellular energy production, tissue and nerve repair, DNA repair, homocysteine management, and hemoglobin production. Vitamin B12 is a cofactor in DNA synthesis and the metabolism of fatty acids and amino acids, which are crucial for the generation of new cells and the repair of damaged tissues. The 2 forms of B6 aid in protein metabolism and are essential for red blood cell metabolism and the production of hemoglobin. This supplement is particularly important for the health of neurons and blood cells, contributing to the overall process of tissue repair and regeneration.

ActiFlex (Tissue, Joint, and Muscle Support)

ActiFlex is designed to support joint and muscle health through a combination of ingredients that reduce inflammation, relieve pain, and support the structural integrity of connective tissue. It may contain components like glucosamine, chondroitin, and MSM (methylsulfonylmethane), which have been shown to support cartilage repair, improve joint function, and reduce symptoms of osteoarthritis. By promoting the health of connective tissues, ActiFlex aids in the overall process of tissue regeneration and repair.
